

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ABSTRACTS :—

MARRIAGES Registered in England in each of the Registration Divisions, Counties, and Districts; distinguishing those according and those not according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks	1-25
AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows	26-28
BIRTHS and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, Districts, and Sub-districts; distinguishing the Sexes in Divisions and Counties, and Illegitimate Births throughout	29-91

ABSTRACTS—continued.	PAGE
DEATHS of Males and Females in Public Institutions.	93-114
DEATHS of Males and Females at different AGES Registered in DIVISIONS, COUNTIES, and DISTRICTS	115-136
CAUSES of DEATH of Males and Females in England and Wales at different Periods of Life	137-145
CAUSES of DEATH of Males and Females in LONDON at different Periods of Life	146-153
CAUSES of DEATH of Males and Females in ENGLAND, and in each of the DIVISIONS and COUNTIES	154-177
DEATHS from SEVERAL ZYMOTIC and OTHER CAUSES, and INQUEST CASES, in DIVISIONS, COUNTIES, and DISTRICTS	178-210
 VIOLENT DEATHS from ACCIDENT and NEGLIGENCE, distinguishing SEX and AGE	 211-217
DEATHS of INTOXICATED PERSONS from ACCIDENT and other CAUSES; MALES and FEMALES	214, 217
DEATHS returned as having occurred from SUICIDE, distinguishing SEX, AGE, and METHOD	218-219
DEATHS returned as having occurred from MURDER, distinguishing SEX, AGE, and METHOD	220-221
DEATHS returned as having occurred from MANSLAUGHTER, distinguishing SEX, AGE, and CHARACTER	222-223
INDEXES of DISTRICTS, SUB-DISTRICTS, and of certain TOWNS, referring to Numbers used in the several TABLES of ABSTRACTS	224-239
ALPHABETICAL INDEX to REPORT and TABLES	241-255

REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March, 1885.

(1883.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of births, marriages, and deaths that were registered in England and Wales in the year 1883, together with a report on the main features of the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were respectively 890,722 and 522,997, so that the natural increment of the population, or excess of births over deaths, was 367,725, and equal to 1·38 per cent. of the estimated population at the beginning of the year. The natural increment was somewhat lower than in the preceding year, when it was 372,360. This falling off was not due to an increase in mortality, for the death-rate fell slightly in 1883, but to a decline in the birth-rate, which was 33·7 in 1882, but fell to 33·3 in 1883. The population of England and Wales, as enumerated in April 1881, numbered 25,974,439 persons. The excess of births over deaths registered between that enumeration and the middle of 1883 was 857,139; so that the population at the later date, if its growth were determined simply by the balance between births and deaths, would have been 26,831,578. But in this country there is always a loss of population, owing to emigration being in excess of immigration; so that the number just given requires reduction. Unfortunately it is impossible to say with any precision how great that reduction should be; for, though the number of emigrants of English and Welsh origin is approximately known from the annual returns made by the Board of Trade, there is no similar information as to the immigrants into that division of the United Kingdom. The number of emigrants of English origin in 1881, 1882, 1883 was vastly in excess of the average (see Tables 67, 68); this increased emigration may possibly have been counterbalanced by increased immigration, but as to this, as already stated, there are no trustworthy data to guide us.

Under these circumstances, it is best to estimate the population by the usual method, namely, by assuming that the rate of growth which existed in the last intercensal period has been maintained in the years that have since elapsed. On this hypothesis the population of England and Wales in the middle of 1883, consisted of 26,770,744 persons, of whom 13,027,407 were males, and 13,743,337 were females. This is the population on which the rates in this report have been calculated.

MARRIAGES.

The marriages registered in 1883 numbered 206,384, giving a rate of 15·4 persons married to 1000 persons living.

This was practically the same rate as that recorded in 1882, which was 15·5. Thus the partial recovery in the marriage rate which began in 1880, from the depression that set in in 1874, was nearly maintained. In the following Table means are given for comparing the fluctuations in the marriage-rate with other accepted measures of public well-being; and it will be noted that again, as in most recent years, the marriage-rate has varied in the same direction as the value of British Exports, and as the average price of wheat. That is to say, all three showed a decline in 1883. A similar decline took place in the amount, per head of population, cleared at the Bankers' Clearing House.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS AND IMPORTS, PRICE OF WHEAT, and amount cleared at the Bankers' Clearing House, in each of the 23 Years 1860–83.*

1882	15·5	6 16 10	11 14 0	20 7 8	45 0	236
1883	15·4	6 14 8	11 19 9	20 11 3	41 7	221

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are also derived from the Board of Trade Statistical Abstracts.

The year of greatest depression in the marriage-rate was 1879. If the rates in that year in the several counties (Table 9) be compared with the rates in 1883, it will be seen that the only counties in which there was no recovery from the depression were Surrey (extra-metropolitan), Sussex, Berkshire, Huntingdonshire, Suffolk, Gloucestershire, Rutlandshire, and North

Wales; and that there was a similar absence of recovery in London, where the rate in 1883 was lower than any previously recorded. On the other hand, the counties in which there was the greatest recovery were Buckinghamshire, Bedfordshire, Cornwall, Shropshire, Staffordshire, Nottinghamshire, the North Riding, Durham, Northumberland, Westmorland, Monmouthshire, and South Wales. Thus, with the exception of London, the parts which showed no recovery were all rural; while, excepting Buckinghamshire and Bedfordshire, the counties which showed the greatest recovery were those in which mining is carried on, where, however, it must be remembered that the depression had been far greater than in the rural counties. The rates in the previous year, 1882, had showed much the same contrast between the agricultural and the industrial counties.

Forms of Marriage.—Of the 206,384 marriages celebrated in 1883, 147,000, or 71·2 per cent. were solemnised according to the rites of the Established Church, and 59,384, or 28·8 per cent., otherwise. In 1841, with which year the Table showing these proportions (Table 5) begins, 93·4 per cent. of all marriages were solemnised according to the rites of the Established Church; but from that date, with scarcely a single break, the proportion has fallen, year by year, till it reached the present and lowest figure. The following Table shows what proportion of the marriages in the Established Church were by licence, banns, and Superintendents Registrar's certificate, respectively. The figures show a further decrease in the proportion of marriages by licence, and a further increase in the proportion of those by banns, has been rising continuously since 1856–60.

" 1883 - -	100	'04	8'66	88'55	2'55

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 482 of the marriages in 1883 the particulars required for the accurate construction of the above Table were not furnished, owing to the negligence of the officiating clergyman. The cases in which there was similar neglect in the preceding year 1882 were 469 in number.

Of the 59,384 marriages, not according to the rites of the Established Church, 8980 were solemnised in Roman Catholic places of worship, showing a decline of 2·8 per cent. from the number in the previous year; 58 were marriages according to Quaker rites; 23,260 were solemnised in the chapels of other Christian communities; 539 were marriages of Jews; and 26,547 were civil marriages in the offices of the Superintendent Registrars. These latter marriages were more numerous than in any previous year; as also were the marriages of Jews, and the marriages in the chapels of dissenting Christian communities (*see* Tables 4 and 5).

First Marriages; Re-marriages. Males.—Of the 206,384 men who married in 1833, 180,830, or 87·6 per cent., were bachelors,* while 25,554, or 12·4 per cent., were widowers.

Of the 180,830 bachelors, 172,430, or 95·4 per cent., married spinsters, while 8400, or 4·6 per cent., married widows.

Of the 25,554 widowers who re-married, 15,508, or 60·7 per cent., married spinsters, while 10,046, or 39·3 per cent., married widows.

Females.—Of the 206,384 women who married in 1833, 187,938, or 91·1 per cent., were spinsters,* while 18,446, or 8·9 per cent., were widows.

Of the 187,938 spinsters, 172,430, or 91·7 per cent., married bachelors, while 15,508 or 8·3 per cent., married widowers.

Of the 18,446 widows who re-married, 8400, or 45·5 per cent., married bachelors, while 10,046, or 54·5 per cent., married widowers.

The decline in the marriage-rate of recent years has, as might be anticipated, affected the re-marriages considerably more than the marriages of bachelors and spinsters; and it will be seen in Table 6 that, notwithstanding the growth of population, the absolute number of marriages of widowers, and, with one trifling exception, of widows, was smaller in each of the years 1879–1883 than in any one of the years 1871–1878.

Marriages of Divorced Persons.—The number of persons married in the year who were described as divorced was 122, and consisted of 63 men and 59 women. Of the 63 men, 53 married spinsters, 8 married widows, and 2 married divorced women. Of the 59 women, 42 married bachelors, 15 married widowers, and 2 married divorced men.

Ages at Marriage.—In 29,582, or 14·3 per cent., of the marriages, the officiating minister or the registrar neglected to insert in the register the age of one or of both of the parties. The mean age at marriage of the remaining 176,802 couples, whose ages were duly stated, were 27·9 years for the males and 25·7 for the females. The mean age of the bachelors was 25·9 and of the spinsters 24·4 years; the mean age of the widowers was 43·4 and of the widows 39·7 years. These mean ages tally almost exactly with those recorded in previous years. Such slight differences, however, as are presented by the figures in the following table indicate a tendency in recent years on the part of men to defer marriage till a later age than was formerly the case.

* The 63 divorced men who remarried in the year are here reckoned as bachelors, and the 59 divorced women who re-married are reckoned as spinsters.

TABLE C.—MEAN AGES AT MARRIAGE.

YEAR.	Bachelors.	Widowers.	Bachelors and Widowers.	Spinsters.	Widows.	Spinsters and Widows.

1883	25·9	43·4	27·9	24·4	39·7	25·7

The English are a people much given to matrimony. Not only is their average annual marriage-rate higher than those of all other European countries, of which statistics are given in Table 70 (p. cl.), with the exceptions of the German and the Austro-Hungarian Empires, but they also marry at an earlier age than is the case in any other European country excepting Russia. In Russia a very large proportion of the marriages are between boys and girls under 20 years of age; and it is stated that no less than from 60 to 70 per cent. of the conscripts, who cannot be over 21 years of age, are already married when they come to be enrolled into the army. The explanation given of this strange anomaly by M. Pietro Semenov, is that in Russia the population contains an enormous proportion of small agriculturists, who are in the habit of marrying their sons at as early an age as possible (the legal age being 18 for males) in order to secure an additional female labourer. Putting aside this exceptional case of Russia, it will be seen from the following Table*, that in no other country of which the statistics are given, is the proportion of either males or females who were under 25 at the time of marriage so high as in England. Very young brides, brides that is to say under 20 years of age, are proportionately more common in France; but with this exception, and of course that of Russia, the figures for England in each of the first two columns, both for males and females, are higher than that for any other country.

* This Table is based on figures taken from the *Confronti Internazionali*, prepared by Signor Bodio, and published by the Italian Government (Rome 1884). As to Russian Marriages, see *Conf. Intern. p. clviii.*, and Wallace's *Russia* i. 138.

Marriages of Minors.—The numbers of boys and girls under 21 years of age who married in 1883 were 15,322 and 44,963 respectively; so that of every 100 males who married 7·42, and of every 100 females who married 21·79 were under age. The percentage of these premature marriages showed a slight decline from that in 1882; but the proportions among both males and females were, with the exception of those in the year 1882, higher than in any year since 1877. The prudential considerations which have lowered the general marriage-rate, and especially have diminished the number of re-marriages, appear to have had less influence upon those who have not yet reached the age of legal independence.

Signature in Marriage Register.—Of the males who married in the year, 12·6 per cent. were unable to sign their names, while the percentage of similarly illiterate brides was 15·5. These percentages were both considerably lower than any previously recorded, and testify to a satisfactory progress in elementary education. How great that progress has been, and how much greater it has been in the last decennium than in earlier periods, is shown in the following short Table, which gives the percentages of illiterate marriages at intervals of ten years, going back from 1883, and further shows in the last two columns the rate of decrease in each successive decennium.

TABLE E.—DECLINE IN ILLITERATE MARRIAGES.

Date.	Signature by Mark, per 100 Marriages.		Decrease per cent. of Signatures by Mark in each decennium.	
	Males.	Females.	Males.	Females.
1843	32·7	49·0	7·0	10·4
1853	30·4	43·9		
1863	23·8	33·1	21·7	24·6
1873	18·8	25·4	21·0	23·3
1883	12·6	15·5	33·0	39·0

It will be seen that the progress in the diffusion of elementary education, as measured by the ability to sign the name in writing, was very much greater in the last decennium, than in any of the three preceding periods; the proportion of illiterate bridegrooms having fallen 33 per cent. in the course of the last ten years, and the proportion of illiterate brides having fallen no less than 39 per cent. In the course of the entire period of 40 years the proportion of illiterate males decreased by 61·5, and the proportion of illiterate females by 68·4 per cent.

The registration counties in which there were the *highest* proportions of illiterate men in 1883 were, beginning with the worst, Monmouthshire, Staffordshire, Suffolk, Norfolk, and Cambridgeshire, in all of which the proportion was over 20·0 per cent. The registration counties in which there were the *lowest* proportions, beginning with the best, were Westmorland, London, Surrey (extra-metropolitan), Middlesex (extra-metropolitan), Hampshire, and Northumberland, in all of which the proportion of illiterate men was under 9·0 per cent.

The registration counties in which there were the *highest* proportions of illiterate women, beginning with the worst, were South Wales, Staffordshire, Monmouthshire, North Wales, Durham, Lancashire, and Bedfordshire, in all of which the proportion exceeded 22·0 per cent. The registration counties in which the proportions were *lowest*, beginning with the best, were Surrey (extra-metropolitan), Sussex, Westmorland, Hampshire, Middlesex (extra-metropolitan), Rutlandshire, and Berkshire, in all of which the proportion of illiterate women was under 7·0 per cent.

Taking the whole country in the aggregate, the proportion of illiterate women is considerably higher than the proportion of illiterate men; but there are wide differences between the counties in this respect. The general rule (*see* Table 10) is that in the metropolitan and in the agricultural counties the women are more educated than the men; whereas in the mining and industrial counties the reverse is the case, the men being more educated than the women.

Speaking generally, and of both sexes, elementary education appears to be most generally diffused in the little county of Westmorland, and after this in London and the adjoining counties of the South-Eastern division, Devonshire in the South-Western division also holding a high position; while the parts that show the greatest deficiency are Monmouthshire and Wales, Staffordshire, and Bedfordshire (*see* Table 10).

Certified Places of Worship.—The number of places of worship (not belonging to the Established Church) on 31st December 1883, certified under Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, was 22,793. There were 815 new buildings registered during the year, while 92 were removed from the register by cancellation; the net increase during the year was therefore 723.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1883, was 9170 (*see* Table 11), showing an increase of 165 during the year.

BIRTHS.

The births registered in the year numbered 890,722, and were in the proportion of 33·3 per 1000 persons living.

The birth-rate was at its maximum (36·4) in 1876, and declined continuously from that date, till it reached, as already stated, 33·3 in 1883, this being the lowest rate recorded since 1853, when it was exactly the same (*see* Table 2).

The lowest birth-rates were 26·6 in Herefordshire, 28·2 in Shropshire and in North Wales, 28·8 in Dorsetshire, 29·0 in Devonshire, 29·1 in Huntingdonshire, and 29·3 in Sussex and in Cornwall; while the highest were 39·0 in Durham, 37·9 in Nottinghamshire, 37·8 in Staffordshire, 35·8 in Monmouthshire, and 35·1 in Lancashire; the lowest rates, as usual, being in the agricultural, and the highest in the mining and industrial districts.

Sex.—The male births numbered 453,076, and the female births 437,646, so that the former were to the latter in the proportion of 103·5 to 100 (*see* Table 16). This is the lowest proportion as yet registered in this country, and corroborates the statement made in a previous report (43rd Ann. Rep., p. xvi), that for some reason, as yet unexplained, the proportion of male to female births in England and Wales has been gradually declining.

Illegitimate Births.—The illegitimate births registered in the year amounted to 42,646, equal to a rate of 1·6 infants born out of wedlock to 1000 persons living. The rate had been precisely the same in the preceding year 1882, and was lower than in any other year since civil registration began. From 1851 to 1865 the illegitimate birth-rate was invariably either 2·2 or 2·3 per 1000 persons, but from that date it fell continuously though slowly until it reached, as before said, 1·6 (*see* Table 13). How constant are the differences between one county and another as regards the prevalence of illegitimacy may be seen in Table 15, which shows the proportion of illegitimate births to total births in each county in 1883 and also in the previous ten years.

Taking the whole of England and Wales, and neglecting decimals, one child out of twenty is born out of wedlock.

DEATHS.

The deaths registered in the year numbered 522,997, and were in the proportion of 19·5 to 1000 persons living. In 1881 the rate had been 18·9, but with this single exception the rate in 1883 was the lowest as yet recorded. It is a notable fact, as testifying to the progress of sanitary improvement, that the death-rates in the first three years of the present decennium were the three lowest on record; and not only so, but that the death-rates in the five preceding years, 1876–80, were also one and all far below the average.

The general death-rate is affected more or less materially by the age and sex distribution of the population; the rate being higher, *ceteris paribus*, when the population contains a larger proportion of young children and of aged persons, and also when it contains a larger proportion of males. These proportions vary in the populations of different places, and to some extent in the population of the same place when taken at considerable intervals of time. It is always preferable, therefore, to base any comparisons of mortality, not upon the general death-rate, but upon the rates at each successive age-period, and in each sex. Tables 21, 22, and 23, give the means for doing this for England and Wales; and it will be seen in Table 23 that the low general death-rate of the three years 1881–83 was mainly due to diminished mortality in the earlier age-periods. The death-rate of females was, it is true, below the average at each separate age-period, save one, when it corresponded with the average; but while the death-rate of males at each age-period up to 45, and over 75 years of age, was below the average, the death-rates of this sex in the intervening stages of life, 45–75 years of age, were above the average.

If we take the death-rates at successive age-periods in each sex, as given in Table 23, and apply these rates to a population in which the age and sex distribution remains constant—and for this purpose it will be most convenient to adopt the distribution* at the time of the last Census—we can obtain general death-rates corrected for differences of age and sex distribution. The changes in distribution have been so small in this country, that the recorded death-rates are found to undergo little alteration

* The age and sex distribution of the English population in 1881 was as follows, per 1000 persons :—

—	All Ages.	Under 5.	5—	10—	15—	20—	25—	35—	45—	55—	65—	75 and upwards.
Persons -	1000	135	121	108	98	90	145	114	84	59	33	13
Males -	487	67	60	54	49	43	70	55	40	28	15	6
Females -	513	68	61	54	49	47	75	59	44	31	18	7

by such correction. The following Table shows both the recorded and the corrected rates.

TABLE F.—MEAN ANNUAL DEATH RATES.

	Years.	Recorded Death-rate.	Corrected Death-rate.
	1838-40	22·38	22·65
	1841-45	21·38	21·61
	1846-50	23·32	23·41
	1851-55	22·66	22·75
	1856-60	21·80	21·77
	1861-65	22·58	22·46
	1866-70	22·42	22·25
	1871-75	21·96	21·87
	1876-80	20·82	20·71
	1881	18·88	18·88
	1882	19·56	19·57
	1883	19·54	19·54

Infant mortality.—The deaths of infants in the first year of life numbered 122,226, and were in the proportion of 137 deaths to 1000 live-born children, the proportion in the immediately preceding ten years having been 145. (See Table 26.)

Only on three occasions, since civil registration began had a smaller infantile death-rate been recorded in this country than in 1883, those three exceptional years (see Table 31) being 1877, 1879, and 1881.

The infantile death-rate was, as usual, lowest in Wiltshire and Dorsetshire; and was also very low in Rutlandshire, Berkshire, Oxfordshire, Surrey (extra-metropolitan), Westmorland, and Sussex, in none of which was it above 105; while it was, also as usual, highest in the counties of Nottingham, Stafford, Leicester, Lancaster, and the East Riding, in each of which it exceeded 150.

Centenarians.—Of the 522,997 persons who died in the year, 63 were stated to have completed a century of life; 13 of these reputed centenarians being males and 50 being females. Of these 63 deaths, 48 were attributed simply to old age or exhaustion, 7 to bronchitis, 2 to heart affections, 2 to gangrene, one to palsy, one to intestinal obstruction, one to diarrhoea, and one to cancer.

Sex.—Of the deaths registered in the year, 269,262 were of males and 253,735 were of females, giving a male death-rate of 20·67, and a female death-rate of 18·46 per 1000; the mean annual rates in the preceding decennium having been 22·2 and 19·6 respectively. The male death-rate was therefore 6·8 per cent., and the female death-rate 5·6 per cent., below the preceding decennial averages. Out of equal numbers living in each sex there died 1120 males to 1000 females. The proportion in the preceding ten years had been 1129 male deaths to 1000 female deaths.

Urban and Rural Mortality.—The death-rate in the urban population, that is to say, in those districts and sub-districts that comprise the chief towns, and that have between them some fifteen and a half millions of inhabitants, was 20·8 per 1000, while the death-rate in the remaining and comparatively rural parts of England and Wales, with ten and a half millions of inhabitants, was 17·7 per 1000 (see Tables 45 and 46). This urban rate was 7·6, and this rural rate was 4·8 per cent., below the average rates in the preceding ten years.

The difference as regards healthiness between town and country is considerably greater than would be inferred simply from the difference in their death-rates; for, as was explained in my last Annual Report, the population of towns contains a much larger proportion of females, and of

adults of both sexes in the prime of life, and a much smaller proportion of very aged persons, than does the population of the more rural parts; with equal death-rates at each age-period in each sex, that is with equal healthiness, the general death-rate in the aggregate urban sanitary districts should be 10·6 per cent. lower than the general death-rate in the aggregate rural sanitary districts, whereas the urban rate, as given above, in 1883 was 17·5 per cent. higher than the rural rate.

The aggregate urban sanitary districts are, it is true, not quite identical with the districts taken above to represent the urban population; but for our present and for practical purposes they may be considered to be the same thing; and assuming this, the urban rate in 1883, after due approximate correction for differences of age and sex distribution, was more than 31 per cent. higher than the rural rate; and not merely 17·5 per cent., which is the difference between the two recorded, or uncorrected, rates.

REGISTERED CAUSES OF DEATHS.

The assigned causes of death were distributed in the several classes as follows:—

TABLE G.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1883.	Rate per Million living.			
		1883.	1882.	1881.	Mean 1871-80.
Zymotic diseases - - -	70,644	2,639	3,088	2,660	3,727
Parasitic diseases - - -	1,039	39	37	39	57
Dietetic diseases - - -	1,763	66	68	65	63
Constitutional diseases - -	91,203	3,407	3,395	3,328	3,597
Developmental diseases - -	43,710	1,632	1,558	1,583	1,676
Local diseases - - -	264,757	9,890	9,591	9,348	9,928
Violence - - -	18,053	675	669	697	737
Ill-defined and not specified causes -	31,828	1,188	1,154	1,160	1,611
All causes - - -	522,997	19,536	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of diseases were 70,664, being in the proportion of 2639 to a million persons living, a proportion which, as shown in Table G., was lower than that in either of the two preceding years, and no less than 29·2 per cent. lower than the mean annual proportion in the decennium, 1871-80.

The deaths from *small-pox* were (*see* Table 28) in the proportion of 36 per million living; on three occasions, viz. in 1875, 1879, and 1880, the mortality had been lower than this; but these were the only years since civil registration began (*see* Table 31) in which the small-pox mortality was so low as in 1883. For the four years 1843-6 the causes of death have not been abstracted.

In addition to the 957 deaths ascribed to small-pox, 99 were registered as due to *chicken-pox*. Varicella, however, or chicken-pox is usually so trifling an ailment, and so rarely if ever fatal, that it may be assumed with much probability that the greater part of the hundred or so deaths that year after year are referred to this cause are in reality

cases of small-pox. It would, therefore, probably be better, were the deaths ascribed to varicella taken into account in calculating the small-pox mortality. This would raise the small-pox death-rate to 39 instead of 36 per million living; but the mortality, even when thus raised, is still lower than in any previous year, save the three before mentioned.

In by far the largest number of the small-pox deaths, viz. in 717 out of the 957, no adequate information was given as to whether the deceased had or had not been previously vaccinated. It is much to be regretted that medical men in the country should not take pains to ascertain this fact, and to state it fearlessly in their certificates. When an outbreak of small-pox occurs in London, so large a proportion of the deaths take place in hospitals, that information as to vaccination is forthcoming in about two thirds of the total number of deaths; but in outbreaks outside London, where hospital accommodation is not furnished to an equal extent, the private medical attendant is apparently unwilling to state facts which might be disagreeable to the relatives of the deceased; and, consequently, information that would be of great value is very generally withheld. Out of the 240 fatal cases in which alone the necessary information was given, 162 or 67 per cent., were of unvaccinated, and 78 or 33 per cent., were of vaccinated persons. Assuming a similar proportion among the not-stated cases, and assuming the ordinarily received estimate to be correct, that only one out of twenty persons on the average is unvaccinated, there were in 1883, for equal numbers living, more than 39 deaths among the unvaccinated to one death among the vaccinated.

On the other side of the account have to be placed the deaths ascribed, rightly or erroneously, to "cow-pox and other effects of vaccination." These amounted in all to 55 in the course of 1883. In 1881 and 1882 they had been respectively 58 and 65; making a total of 178 deaths in the three years. In that period the number of vaccinations amounted to about two and a half millions; so that the deaths ascribed to this process were less than 71 to a million vaccinations.

If the 55 deaths ascribed to vaccination be added, as may fairly be claimed, to the deaths from small-pox of vaccinated persons, the deaths of the unvaccinated to the deaths of the vaccinated, out of equal numbers living, are reduced from the proportion of 39 to one, to the proportion of 34 to one.

The deaths from *measles* were in the proportion of 348 per million living. The proportion had been lower than this in ten of the forty-one preceding years, for which we have records, but in 1883 it was nevertheless considerably below the average.

Still more satisfactory was the death-rate from *scarlet-fever*. The deaths caused by this disease were 472 per million living; a proportion not only far below the average, but lower than that in any preceding year, with the exception of 1838 and 1861.

Less favourable were the returns under the heading *diphtheria*. The deaths from this disease were in the proportion of 158 per million living; and putting aside the 1858-1865 period in which this malady was exceptionally fatal, the mortality was higher than in any previous year. The returns of diphtheria, however, as has been noted in previous reports, are not so trustworthy as could be wished. The mortality registered as due to diphtheria was, as usual, higher in the female than in the male sex. For males the mortality was 152 per million living; while for females it was 163. (See Table 35.)

The mortality from *whooping-cough* was in the ratio of 391 deaths per million living, and lower than in any previous year, save 1840, when it was precisely the same. Whooping-cough resembles diphtheria in the fact that, while most zymotic ailments attack males more than females, these two diseases are more fatal among the latter. The death-rate from whooping-cough among males was 373, and among females 409 per million living. (See Table 35.)

The deaths from *enteric fever* numbered 6078, and were in the proportion of 227 per million living. The proportion was almost the same in 1882, and was slightly lower in 1881; but in no other year had it been so low as in these three successive years. Nor was this decline of mortality attributable to any confusion between enteric and simple or ill-defined forms of continued fever; for under this latter heading, as under the former, there was a similar decline. It is to be observed, that though the decline in the mortality from continued fevers has been very great and very rapid, when the recent rates are compared with those of ten and twenty years ago, very little progress has been made in the last five years, the rates during that period (1879-83) having remained almost stationary. The more glaring and general sanitary defects have apparently been dealt with, and it remains to hunt out and sweep away the less conspicuous nuisances, affecting individual households.

The deaths from *diarrhœa* and *dysentery* numbered 15,933 and were in the proportion of 595 to a million living. The proportion had been 452 in 1879, 546 in 1860, and 558 in 1881, these being the years with the lowest diarrhœal mortality; but, excepting these three years, the mortality was lower in 1883 than in any other year from 1847 inclusive. In each of the years mentioned as having low diarrhœal mortality, the mean temperature in the summer quarter was more or less below the average; and in 1883 the departure in this quarter from the average of 35 years amounted to 0°·8 Fahr. (See Table 63.)

Parasitic Diseases.—Most of the deaths grouped under this heading are deaths of children attributed to thrush. The reference of infantile deaths to thrush was formerly much more common than is the case at present, and consequently the mean annual death-rate from these diseases was much higher in 1871-80, than in the last few years, and was higher in 1861-70 than in 1871-80 (see Table 29). But since 1880, the rate has remained practically stationary. It was 39 per million in 1881, 37 in 1882, and again 39 in 1883.

Dietetic Diseases.—The mortality from this group of diseases in the aggregate has remained almost stationary for many years. It was 63 per million annually in 1871-80, and in the three years after that decennium was successively 66, 68, and 66 (see Table 29); but when the diseases included in this group are considered separately, it is found that under the heading *intemperance* there has been a slight increase; an increase, however, which, as was stated in my last Annual Report, is almost certainly attributable simply to more conscientious statement of cause, and not to any real increase of intemperance in the country. For not only do the returns of the Board of Trade show a large diminution in the consumption of intoxicating drinks, and the Census Returns show a large falling off in the number of persons engaged in the liquor trades, but our own mortality returns supply one strong piece of evidence that tells in the same direction. That evidence is as follows. The organ upon which alcoholic excess falls with the greatest weight is the liver; and it is found that in those trades in which there is notoriously habitual excess, as for instance among publicans, the mortality from liver diseases is enormously high. The fluctuations in the mortality from these diseases furnish, therefore, a useful measure of the comparative prevalence of intemperance; and the more so, inasmuch as medical men who might hesitate to give alcoholism in their certificate as the cause of death, for fear of offending surviving relatives, would have no similar hesitation in referring a death to hepatic disease. Now it will be seen, on referring to Table 28, that the mortality from liver diseases, including *ascites*, has been declining for some years, and was lower in 1881, 1882, and 1883 than in any other years in the Table, which goes back to 1860.

Constitutional Diseases.—The aggregate mortality from the various diseases included in this group was 3407 per million; a mortality considerably below the annual mean in 1871-80, but not very different from the mortality of either 1881 or 1882. Limiting ourselves to the three years that have elapsed since the close of the last decennium, it will be seen (Table 29) that the mortality from *rheumatic fever* and *rheumatism* as also from *phthisis* and *other tubercular or scrofulous affections*, remained practically at the same point; while under the heading *cancer* there was a progressive increase; this increase, it is true, was not great—the mortality per million being 520, 532, and 546, successively—but was of importance, as being a continuation of the steady increase that had been going on year after year for a long period. In the decennium 1851-60 the deaths attributed to cancer or malignant disease were 317 annually per million persons living; in the next decennium 1861-70, the mortality had risen to 386; in 1871-80 it had further advanced to 471; while in 1881-83 it reached a mean of 533. How much, if any, of this increase was real cannot be stated with any certainty; but that some part of the apparent increase was only apparent, and due to improved diagnosis and more careful statement of cause can, as we stated in previous reports, scarcely be doubted. Year by year the number of deaths ascribed to “abdominal disease” and other imperfectly stated causes has been undergoing diminution, and there has been of course a corresponding addition to the mortality under the more definite headings. Moreover, the increase of mortality from cancer has been considerably greater in the male than in the female sex. Now, were the rise not only apparent but real, there would seem to be no reason why males should have suffered more than females; whereas the difference is readily intelligible on the hypothesis that the rise was, at any rate in great measure, merely due to improved diagnosis. For the cancerous affections of males are in much larger proportion internal or inaccessible than are those of females, and consequently are more difficult of recognition, so that any improvement in medical diagnosis would add more to the male than to the female figures.

The mortality from *diabetes* was 51 per million living, a higher proportion than any previously recorded. As has been stated in previous reports it is probable that the apparent increase which for years has been going on in the mortality under this heading has been due to improved certification. It has been objected to this explanation that advanced diabetes is so marked a disease that an erroneous diagnosis of a fatal case is almost impossible. This doubtlessly is true; but it is also true that medical men, even when they have correctly diagnosed a disease, very frequently omit, from indolence or carelessness, to state that cause in their certificates, and it is to their happily increasing carefulness in this matter that I am inclined to attribute the apparent increase of diabetes. It cannot of course be positively asserted that there has been no real increase of this disease; there are no data to enable any one to decide absolutely whether this has or has not been the case. All that is here stated is that the apparent increase has not been by any means necessarily a real increase; and that there has been, and still is, another cause, namely increasing care in the statement of cause, to which very possibly the apparent rise may be attributable. It has been further suggested that the increase of diabetes has not only been a real increase, but has been due to the increasing mental strain and worry of modern life; and a similar explanation has been suggested for the apparent increase of mortality from some other diseases, namely, from rheumatic fever and rheumatism, and from certain renal affections.* It may be well, therefore, to point out, that the increase under these headings has been fully as great among children

* See Dr. Crichton Browne's Report to the Education Department upon the alleged Over-pressure of Work in Public Elementary Schools, 1884.

under five years of age, as among either children of school age or adults.

Developmental Diseases.—The mortality attributed simply to *old age*, which had been falling for many years, in consequence of more careful statement of causes of death, rose again, and not inconsiderably, in 1883; and this although the temperature of the March and December quarters, by which the mortality of aged persons is especially influenced, had not by any means been unfavourable. A possible explanation of this increase will be suggested when we come to deal with local diseases.

The deaths from *premature birth* also rose in 1883 (*see* Tables 28 and 29), as they had been doing with some fluctuations in many previous years. As was pointed out in my last Annual Report it is not impossible that this progressive rise may be connected with the marked increase in the employment of women in industrial occupations.

Local Diseases.—Among the several groups of diseases included in this large class, there were several that showed in 1883 a more or less considerable increase of mortality. This was notably the case with *diseases of the nervous system*, exclusive of convulsions, with *diseases of the organs of circulation*, and with *diseases of the urinary system*. The increase in these several groups of diseases was the more noticeable, inasmuch as during the three immediately preceding years, 1880–1–2, there had been an apparent arrest in the almost continuous rise that had been going on for many previous years (*see* Table 28). The mortality from urinary diseases reached 446 per million living, and was at its maximum point; the mortality from nervous diseases, excluding convulsions, was in the proportion of 1855 deaths per million living, a proportion which had never been equalled except in 1875 and 1879; while the mortality from diseases of the circulatory system was at the rate of 1465 per million, and higher than in any year excepting 1879. The year 1883 was for some reason or other unfavourable to aged persons; though the mortality at the earlier age-periods fell, the mortality at the more advanced ages rose (*see* Tables 21 and 22), and so of course did the mortality referred to those diseases to which later life is especially liable. What was the peculiarity in the year that made it so unfavourable to the more advanced ages of life is not apparent; it was not seemingly the usual enemy of the aged, prolonged periods of cold, for the mean temperature of the March quarter, as previously pointed out, was not below the average, and the mean temperature of the December quarter was 1°·3 Fahrenheit above the average for 112 years (*see* Table 65). Moreover the mortality from *diseases of the respiratory system*, which is especially influenced by cold weather, though somewhat higher than in either 1881 or 1882, was not above the average; the deaths due to these diseases were 3656 per million living, but they had averaged 3687 in 1871–75, and 3800 in 1876–80 (*see* Table 29).

Possibly the explanation of the high mortality of persons of more advanced life in 1883 is to be found in the low mortality among them in the three preceding years, owing to which there had been an accumulation of weak lives, ready to drop off from comparatively slight causes.

The mortality under the heading *convulsions* again fell, as it had generally done in recent years, in consequence of improved statement of causes, and was in 1883 at the lowest point yet attained. The same was the case with *diseases of the liver* and *ascites*, giving, as was previously mentioned, good evidence of a diminution of intemperance.

The mortality from *childbirth* and from *puerperal fever* is best measured by the proportion of mothers who die from these causes to the infants born in the course of the year. The proportion was 5·1 deaths of mothers to

1000 infants born alive. The proportion had been precisely the same in 1882, and in 1881 had been 4·8 (*see* Table 41), these being the only two years with which strict comparison can be made, inasmuch as the system introduced in 1881 of applying for further information in respect of deaths ascribed simply to peritonitis has added materially to the puerperal returns. The puerperal mortality varies much in different parts of the country (*see* Table 42). It is especially high in North Wales; and apparently, as a general though not universal rule, higher in mining and industrial than in purely agricultural counties. What are the conditions of female life that determine these differences, is a question that deserves investigation.

Violent Deaths.—The total number of deaths ascribed to some or other kind of violence was 18,053, being in the proportion of 675 to a million persons living. This proportion differed but slightly from that recorded in each of the four preceding years, 1879–1882; but was very considerably lower than the proportion in any earlier year (*see* Tables 28 and 29). The decline was mainly in the deaths attributed to accident or negligence, which form the great bulk of the violent deaths. Though there was also a slight fall in the mortality from murder and homicide, these deaths are inconsiderable in number; while the mortality from suicide, though fractionally lower than that in the four immediately preceding years, was nevertheless high, the tendency to suicide having increased of late years, and the highest figures under this heading (*see* Table 28) being those of the five years 1879–1883.

TABLE H.—MEAN ANNUAL VIOLENT DEATHS PER 10,000 LIVING,
1881–83.

The mortality from violence differs very greatly in different parts of the country, these differences being determined in some degree by the age and sex distribution of the population, but mainly by the nature of its occupations. The annual death-rate of males from violence is, taking an average of the ten years 1871-80, 1116 per 10,000, while that of females is only 369. Consequently a large proportion of females in the population, as in Bedfordshire, tends to bring down the rate. Again, nearly a third part of the deaths from violence occur among children under ten years of age, and consequently the rate of mortality from violence is affected by the proportion of such children in the population. The differences, however, produced by these conditions of age and sex distribution are insignificant, as compared with those due to diversities of occupation. Of all industries the one most exposed to risk of fatal accident is mining; after which come the occupations of quarrymen and of fishermen. These latter, however, do not form a sufficient portion of the total population of any county to produce any material difference in the aggregate death-rate from violence. Consequently it is found practically that the death-rate from violence is notably above the average in those counties only where a large proportion of the inhabitants is engaged in mining. This is conspicuous in the preceding table which gives the mean annual mortality from violence per 10,000 living in the several registration counties, in the three years 1881-82-83.

Ill-defined and non-specified Causes.—In 31,828 of the deaths, or 6.1 per cent. of the whole number, the cause of death was not stated with sufficient completeness to enable the death to be properly classified. The great bulk of these unsatisfactorily returned deaths were ascribed to debility, atrophy, or inanition, without further specification; but 1,848 were ascribed to dropsy, and may have been due either to renal, hepatic, cardiac, or other diseases; 357 were simply described as caused by tumour, 418 simply as sudden deaths, and so on. The exigencies of office-work render it impossible to make further inquiries as to all these numerous deaths; but, so far as was possible, the system instituted in 1881 was continued, and 1179 letters of inquiry were sent out, which elicited in most cases such additional information as was necessary.

The Royal College of Physicians has now printed a revised edition of their Nomenclature of Diseases, and the Government has undertaken to supply a copy of it gratuitously to every registered medical practitioner in the country. Under these circumstances it is surely not unreasonable to ask that medical men shall, in stating causes of death, conform to the terminology adopted and recommended by the College. Were they to do so the process of classification of deaths in the General Register Office would be much simplified and facilitated.

Certification of the Causes of Death.—During the year 1883 the causes of 475,201 or 90.9 per cent., of the 522,997 deaths were certified by registered medical practitioners; while the causes of 28,448 or 5.4 per cent. were certified by coroners. The causes of the remaining 19,348, or 3.7 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. In the metropolis the proportion did not exceed 1.3 per cent. Excluding the extra-metropolitan parts of Middlesex and Surrey, the percentage did not exceed 0.7 in Wiltshire, 1.4 in Berkshire, and 1.7 in Buckinghamshire, while it ranged upwards to 5.7 both in Shropshire and Cumberland, 5.8 in Durham, and 6.6 in Cornwall. In Wales the proportion was 9.3 per cent.

It is satisfactory to note a further slight decline in the proportion of uncertified deaths in 1883, compared with the proportions in 1881 and 1882, which were 4.1 and 3.9 per cent. respectively.

PROGRESS OF REGISTRATION.

During the year 1883 no fewer than 1,826,487 names were added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales. At the close of the year the aggregate number of names in these indexes, which on 31st December 1883 embraced a period of 46½ years, was 68,445,762. The total number of searches in 1883 (including those in non-parochial and other records) was 34,809, showing an increase of 1212 or 3·6 per cent. upon the number in the previous year; the number of certificates issued was 28,544, or 3·6 per cent., more than in 1882. The amount received as fees for searches and certificates in the year 1883, and paid into Her Majesty's Exchequer, was 5,356*l. os. od.* (*See Table 49.*)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. *xxi.-xxii.* and *xxv.-xxvi.*

MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 181,971, and that the number of deaths was 1783; so that the rate of mortality was 9·8 per 1000, against 22·2, 17·6, 14·0, and 11·8, respectively in the four preceding years, showing a successive diminution year by year.

The average strength of the Army at home was 90,071, and the deaths were 672; while the average strength of the Army abroad was 91,900, and the deaths 1111. The death-rate at home was therefore 7·5, and the death-rate abroad 12·1 per 1000. (*See Tables 53-57.*)

MORTALITY IN THE NAVY.*

The total force in the Royal Navy afloat, corrected for time, in 1883 was 43,350. The deaths were 255, of which 176 were caused by disease and 79 by violence, including drowning. The death-rate from disease alone was 4·05 per 1000, and considerably lower than in the preceding year, in which it had been 6·87. The death-rate from violence was 1·82, having in the preceding year been 2·62. The total death-rate fell from 9·49 in 1882 to 5·88 in 1883.

Of the 79 deaths caused by violence, 4 were due to wounds received in action, 33 to drowning, 15 to falls from aloft, 2 to asphyxia, 6 to suicide, and 19 to various wounds and fractures, of which the cause was not stated.

The assigned causes of the 176 deaths ascribed to disease were as follow:—

Continued fevers	-	-	20	Diseases of—	
Yellow fever	-	-	4	Circulatory system	- - 17
Paroxysmal fevers	-	-	17	Respiratory system	- - 36
Cholera	-	-	9	Digestive system	- - 14
Rheumatism	-	-	4	Urinary and generative systems	- - - 6
Tubercular diseases	-	-	25	All other causes	- - 8
Diseases of nervous system			16		

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1883 the entries recorded in this Register were 381 births and 4904 deaths. Of these 4904 deaths, 2304 were returned as those of persons of English origin, while 839 were indefinitely returned as those of persons of "British" origin, out of which number it is impossible to estimate the proportion belonging to England.

Among *passengers* on board merchant vessels at sea (see Table 59), 430 births and 941 deaths were reported during 1883; the deaths showed an increase of 39 per cent. upon the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 60), that the number of merchant seamen at sea in registered vessels during 1883 was 200,727. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during the first six months of 1883 were 2751, equal to an annual rate of 27.4 per 1000 of the strength, exceeding by 6.0 the average annual rate (21.4) during the 31 years 1852-82.

EUROPEAN STATES.

In Tables 70-84 will be found international vital statistics relating to thirteen of the principal European States, including England and Wales, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 70 affords the means for comparing the marriage, birth, and death rates in each State, in a series of years, with the mean rate during the period 1861-80. Tables 71-84 contain detailed statistics for each State.

The slight general recovery in the *marriage-rate* observable in the different European States in 1881 and 1882 was scarcely maintained in 1883. The rates recorded in Norway, Austria, the Netherlands, and Belgium were lower in 1883 than in 1882. The rates in 1883, per 1000 of the estimated population, ranged from 12.8 in Sweden, 13.2 in Norway, and 13.5 in Belgium, to 15.7 in Prussia, 16.0 in Italy, and 20.5 in Hungary. The mean rate in the eleven European States furnishing returns for 1883 was 15.7, against 15.4 in England and Wales.

The *birth-rates* in most of the States showed a further decline from those in recent years; the rate in Hungary, however, again showed an increase. The greatest depression in the birth-rate, compared with the mean rates in 1861-80, occurred in the German Empire, Switzerland, and Sweden. The birth-rates in 1883 ranged from 24.8 in France, 28.4 in Switzerland, and 28.9 in Sweden, to 36.7 in the German Empire, 37.1 in Italy, 38.2 in Austria, and 45.3 in Hungary. The mean rate in eleven European States was 34.3, against 33.3 in England and Wales. The births in France exceeded the number returned in any year since 1877, when a marked decline set in; the birth-rate in 1883, however, showed no increase upon the low rate in the previous year.

The *death-rates* in 1883 showed a general decline from those returned in recent years, and excepting in Norway (where the rate was slightly above the mean) the rate in each State was considerably below the mean rate in the years 1861-80. The lowest rates in 1883 were 17·1 in Norway, 17·3 in Sweden, and 18·4 in Denmark; the rates in the other States ranged upwards to 27·5 in Italy, 30·1 in Austria, and 32·6 in Hungary. The mean death-rate in the eleven States furnishing returns was 25·7, and exceeded the rate in England and Wales by no less than 6·2 per 1000.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF THE YEAR 1883.

By JAMES GLAISHER, ESQ., F.R.S., &c.

The most remarkable occurrences during the year were the unusual heavy storms in January, the severe gales in September on the 23rd and 25th days, and a peculiar glow of light during the greater part of the month of December which whenever the sky was clear was visible before sunrise and after sunset, and at times even through the clouds.

The following remarks with regard to the excess or deficiency of atmospheric pressure, temperature, and rainfall are primarily derived from observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The mean daily readings of the barometer were below their averages for the first 2 days in January; from the 3rd to the 8th it was above its average, the mean daily excess being 0.34 in.; from the 9th to the 16th it was below, the average deficiency for these 8 days, being 0.33 in.; then from the 17th till the 24th it was above its average (the 22nd and 23rd, being as much as 0.66 in. to 0.67 in. respectively above), and the daily excess was 0.40 in. From January 25th to February 3rd there was a deficiency of 0.38 in. daily, this was followed by 3 days above, the daily excess being 0.19 in.; from the 7th to the 14th there there was a deficiency of 0.23 in. daily; from February 15th to March 6th there was a daily excess of 0.44 in.; from March 7th to the 31st there was a mean daily deficiency of 0.19 in., for the first 12 days in April the mean daily excess was 0.42 in., on April 13th the reading passed below the average, and continued so with but few exceptions till May 12th, the average daily deficiency of pressure for these 30 days being 0.15 in. From May 13th till the 24th the pressure was above the average daily by 0.21 in.; then for 2 days its was below; from May 27th to June 3rd there was an excess of 0.13 in. daily, then for 6 days there was a deficiency averaging 0.12 in. daily. From June 10th to the 14th there was an excess, of 0.24 in. daily; on the 15th the reading was below and continued so till 21st, the average deficiency being 0.07 in., the 22nd and 23rd were above by 0.04 in., from the 24th to the 28th there was a mean deficiency of 0.10 in., from June 29th to July 2nd there was a slight excess over the average. From July 3rd to the 15th the daily deficiency was 0.17 in., the 16th and 17th days were above, from the 18th to the 24th it was below its average, and the daily deficiency was 0.18 in., this was followed by 4 days above the average, the daily excess being 0.16 in.; from July 29th to the 31st the daily deficiency was 0.17 in. For the first 5 days in August the mean excess was 0.23 in., from the 6th the readings were below until the 15th, the average deficiency was 0.09 in.; for 12 days the mean excess was 0.17 in. daily; on August 28th the reading was below and continued with but slight exceptions till September 11th, then for 8 days an excess of pressure; from the 20th to October 4th there was a deficiency of 0.25 in. daily. From October 5th to the 13th the atmospheric pressure was above its average by 0.32 in. daily, then for 12 days it was below by 0.10 in. daily, from October 26th to November 3rd it was above by 0.28 in. daily. A period of 9 days of low readings followed, viz., from November 4th to the 12th, the mean amount being 0.32 in., from the 13th to the 15th the barometer readings were above their averages by 0.13 in., on the 16th and 17th they were below their daily averages by 0.16 in., from the 18th to the 21st, the pressure was in excess, averaging 0.08 in., for 5 days it was below by 0.37 in. daily, from November 27th to December 2nd it was above by 0.33 in. daily, then for 2 days a deficiency of 0.13 in.; from December

5th to the 9th it was 0·36 in. daily above the average values, from December 10th to the 16th it was 0·22 in. below, and from the 17th to end of the year the average daily excess was 0·30 in.

The highest mean daily reading in the year was 30·659 inches on February 23rd, and the lowest was 28·642 inches on September 2nd; thus giving a range of 2·017 inches.

Temperature.—The mean daily temperature of the air was above its average, with but few exceptions, from January 1st to March 5th, the average daily excess 3°·6. From March 6th to the 31st the temperature was below its average by 6°·4; from April 1st to the 8th, the average excess was 3°·8; from April 9th to the 26th it was below, the average daily deficiency being 1°·7; from April 27th to May 1st it was slightly warmer, being in excess by 1°·6 daily; from the 2nd to the 12th the weather was very cold, being 6°·1 below its mean daily average; a warmer period set in on the 13th, and continued till June 14th, the mean excess being 2°·4; for 8 days the average daily deficiency of mean temperature was 5°·2; from the 23rd to the 25th it was warmer, being 1°·9 above the average; from June 26th to the 28th it was 4°·0 below the average; from June 29th to July 4th the mean excess was 5°·3, July 5th was below by 1°·2, then for 4 days the temperature average 1°·4 then followed a cold period of 39 days, the mean deficiency being 3°·8, this was followed by 13 days of a warmer temperature, the daily excess being 2°·8, from August 31st to September 11th, the deficiency daily was 2°·8, from September 12th to the end of the month the mean daily excess was 1°·7. For the first week in October the average daily deficiency was 5°·6, the temperature was warmer from the 8th to the 17th, the excess daily being 2°·0; for 6 days ending October 23rd the defect of mean temperature averaged 2°·3 daily; the daily excess for the next 9 days being 5°·2. From November 2nd to the 17th the days were cold, the average daily deficiency of mean temperature being 1°·7; from November 18th to December 3rd the weather was warm, being 3° above the daily average, then for 6 days there was an average deficiency of 6°·1; this was followed by 5 warm days, the average daily excess being 4°·6, then 4 days of cold, and from December 19th to the end of the year the excess was 2°·3 daily. The highest mean daily reading in the year was 85°·0 on July 2nd, and the lowest was 24°·0 on March 9th, thus giving a range of 61°·0.

Rainfall.—The fall of rain in January was 1·69 in.; being 0·20 in. below the average; in February it was 2·90 ins., being 1·33 in. above the average. The fall in March was 0·78 in., in April was 1·70 in.; in May it was 1·71 in.; in June was 1·34 in.; in July 1·99 in.; in August was 0·72 in., being respectively 0·77 in., 0·06 in., 0·36 in., 0·66 in., 0·57 in., and 1·71 in. below their averages. In September the fall of rain was 3·82 ins., being 1·41 in. in excess of its average, in October was 1·59 ins., being 1·25 in. below its average; in November it was 2·84 ins., being in excess of its average by 0·50 in., and in December it was 0·83 in. being 1·17 in. below its average. The total fall of rain during the year was 21·9 ins., being 3·50 ins. below its average. The total falls of rain in the year ranged from 49·12 ins. at Bath, 47·00 ins. at Stonyhurst, and 45·08 ins. at Totnes, to 21·90 ins. at Greenwich, 22·50 ins. at Blackheath, and 23·48 ins. at Strathfield Turgiss. The greatest number of rainy days were at Burslem 240, at Salisbury 232, at Nottingham 236; and the least were at Cardington 151, at Holkham 159, and at Barnet 160.

Thunderstorms occurred on 48 days during the year, of these 10 were both in June and July, 7 in November, 6 in May, 4 in October, 3 in December, and 2 in each of January, February, August, and September.

The storms in May, June, and July were general, and those in October, November, and December were chiefly in the north.

Thunder was heard but lightning was not seen on 59 days during the year, of these 16 were in June, 12 in July, 6 in May, August, and September, 4 in February, October, and November, one in March, and none in April or December.

Lightning was seen but thunder was not heard on 32 days during the year, 10 in June, 4 in July and October, 3 in November, 2 in January, May, August, September, and December, one in March, and none in February.

Solar halos were seen on 87 days during the year, 12 in April, 10 in both May and November, 9 in June, 8 in both August and October, 7 in March, 6 in September, 5 in January and February, 4 in July, and 3 in December.

Lunar halos were seen on 43 nights during the year, 7 in January, 6 in February, 5 in both May and August, 4 in both April and October, 3 in both November and December, and 2 in March, July, and September.

Auroræ Boreales were seen on 15 nights during the year, 2 at February, March, April, May, November, and December, one in August, September, October, and none in January, June, or July.

Snow fell on 75 days during the year, on 24 in March, 11 in January, 10 in December, 8 in May, 6 in October and November, 5 in February, 4 in April, one in July, and none in August or September.

Hail fell on 94 days during the year, 17 in November, 15 in March, 9 each in January, October, and December, 8 in February, 6 in both May and July, 5 in both April and June, 3 in September, 2 in August.

Fog prevailed on 158 days during the year, 19 in January, 17 in November, 16 in October, 15 in both February and September, 14 in December, 13 in June and August, 12 in April, 11 in March, 9 in May, and 4 in July.

PRELIMINARY TABLES.
(1883.)

TABLE 2.—ENGLAND.—Population, Marriages, Births, and Deaths, 1838-83.

YEARS.	Estimated POPULATION in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	468,787	342,760	121,027
1839	15,514,255	123,106	246,232	492,574	338,984	153,590
1840	15,730,813	122,665	245,330	502,303	339,687	162,616
1841	15,929,492	122,496	244,992	512,158	343,847	168,311

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the last five Censuses. For the estimated numbers of males and females in each year, and for population estimates for years prior to 1885, see Table 68.

TABLE 2.—ENGLAND.—Annual Rates of Persons Married, Births, and Deaths, 1838-83.

YEARS.	To 1000 PERSONS LIVING.			PERSONS LIVING

* Some marriages between Protestants and Roman Catholics are solemnised twice; such cases are, however, so few, that this source of error may be practically disregarded.

TABLE 3.—ENGLAND.—Of 100 Marriages, those solemnised according to, and not according to, the Rites of the Established Church, 1841-83.

YEARS.	TOTAL MARRIAGES.	ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.					NOT ACCORDING TO THE RITES OF THE ESTABLISHED CHURCH.			
		Licence, including Special Licence.	Banns.	Superintendent Registrar's Certificate.	Not stated.	TOTAL IN ESTABLISHED CHURCH.	TOTAL NOT IN ESTABLISHED CHURCH.	Roman Catholics.	Other Religious Denominations, including Jews and Quakers.	Civil Marriages in Superintendent Registrar's Office.

* Wandsworth was not included in Registration London until 1844; Lewisham and Hampstead were not included until 1847; since that year the boundaries of Registration London have remained unchanged.

For the years 1838-50 the numbers of deaths from the various diseases are derived from summaries of 52 or 53 weeks; for years subsequent to 1850 they are derived from the Annual Reports, and relate to the calendar year.

TABLE 33.—LONDON.—Death-rates from the Principal Zymotic Diseases, and Infant Mortality, 1838-83.

PERIODS AND YEARS.	ANNUAL MORTALITY TO 1000 PERSONS LIVING, FROM THE PRINCIPAL ZYMOTIC DISEASES.										ANNUAL MORTALITY OF Infants under One Year of Age to 1000 Births.
	Small-pox.	Measles.	Scarlet Fever.	Diphtheria.	Whooping cough.	Typhus.	Enteric Fever.	Simple and Ill-defined Fever.	Diarrhoea and Dysentery.	Cholera.

* The prices of coal in 1853-81 are derived from a Parliamentary Return (No. 225, 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons; the quotations for 1882 and 1883 are the means of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

Mean of the Thirty- one years 1852-82	187,613	4,023	21·4

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign ports, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

Elements in the Year 1863. By JAMES GLAISHER, Esq., F.R.S.

Mean Monthly Elastic Force of Vapour.	Mean Weight of Vapour in a Cubic Foot of Air.	Mean additional Weight of Vapour required for Satura- tion.	Mean Degree of Humidity (Saturation=100).	Mean Weight of a Cubic Foot of Air.	Mean estimated Strength.	Wind.				Mean Amount of Cloud (0-10).	Rain.		NAMES OF STATIONS.
						Relative Proportion of					Number of Days it fell.	Amount collected.	
						N.	E.	S.	W.

TABLE 69.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1883.

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.
2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1883.	
23	ST. OLAVE SOUTHWARK	1 February -	The sub-districts of <i>St. John Horsleydown</i> and <i>St. Olave Southwark</i> were united under the name of <i>St. Olave Southwark</i> (aggregate population 11,950).
25	WANDSWORTH - -	1 July -	The sub-district of <i>Battersea</i> was divided into two sub-districts, viz., <i>East Battersea</i> (population 54,375), and <i>West Battersea</i> (population 52,587).
36	REIGATE - -	1 April -	The parish of <i>Merstham</i> (population 903) was transferred from the sub-district of <i>Horley</i> to that of <i>Reigate</i> .
55	EAST ASHFORD - -	1 August -	The sub-districts of <i>Aldington</i> and <i>Brabourne</i> were united under the name of <i>Brabourne</i> (aggregate population 7,627).
75	CUCKFIELD - -	1 January -	The parishes of <i>Bolney</i> and <i>Cowfold</i> (aggregate population 1,842), were transferred from the sub-district of <i>Cuckfield</i> to that of <i>Hurstpierpoint</i> .
82	EAST PRESTON - -	1 October -	Parts of the parishes of <i>Angmering</i> and <i>Leominster</i> were transferred from the sub-district of <i>Littlehampton</i> to that of <i>Arundel</i> .
115	ABINGDON - -	1 January -	The sub-districts of <i>Cumnor</i> and <i>Fyfield</i> were united under the name of <i>Fyfield</i> (aggregate population 4,932).
163	BRIXWORTH - -	1 July -	The sub-districts of <i>Moulton</i> and <i>Brixworth</i> were united under the name of <i>Brixworth</i> (aggregate population 13,336).
191	BILLERICAY - -	1 April -	The sub-district of <i>Great Burstead</i> was dissolved. The parishes of <i>Dunton</i> , <i>Hutton</i> , <i>Little Burstead</i> , and <i>Mountnessing</i> (aggregate population 1,664) were added to <i>Brentwood</i> sub-district; and the parishes of <i>Great Burstead</i> , <i>Laindon</i> , <i>Lee Chapel</i> , <i>Ramsden-Bellhouse</i> , and <i>Ramsden-Crays</i> (aggregate population 3,047) were added to <i>Wickford</i> sub-district.
240	BRADFORD-ON-AVON -	1 January -	The parish of <i>Freshford</i> (population 615) was transferred from the sub-district of <i>Bradford South-Eastern</i> to that of <i>Twerton</i> (317 : 1).
311	WINCANTON - -	1 July -	The parishes of <i>Buckhorn-Weston</i> and <i>Kington Magna</i> (aggregate population 982) were transferred from the sub-district of <i>Wincanton</i> to that of <i>Milborne Port</i> .
396	STRATFORD-ON-AVON -	1 March -	The sub-districts of <i>Kineton</i> and <i>Wellesbourne</i> were united under the name of <i>Wellesbourne</i> (aggregate population 5,155).
396	" "	1 June -	The parishes of <i>Charlecote</i> , <i>Fulbrook</i> , and <i>Hampton-Lucy</i> (aggregate population 754) were transferred from the sub-district of <i>Wellesbourne</i> to that of <i>Wootton-Wawen</i> ; and the parish of <i>Alveston</i> (population 963) was transferred from the sub-district of <i>Old Stratford</i> to that of <i>Wellesbourne</i> .

TABLE 69 (continued).—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1883.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
		1883.	
418	SLEAFORD - - -	1 November	The sub-district of <i>Sleaford</i> (aggregate population 9,217) was dissolved; ten parishes (aggregate population 3,153), viz., Anwick, Ashby-de-la-Land, Bloxholme, Digby, Dorrington, Haverholme, Holdingham, Leasingham, Roxholme, and Ruskington were added to the <i>Billinghay</i> sub-district; nine parishes (aggregate population 5,690), viz., Aunsby, Culverthorpe, Dembleby, Kelby, New Sleaford, Old Sleaford, Quarrington, Silk-Willoughby, and Swarby were added to the <i>Heckington</i> sub-district; and two parishes (aggregate population 374), viz., Brauncewell and Temple-Bruer were added to the <i>Leadenham</i> sub-district. The parish of South Kyme (population 530) was transferred from the <i>Heckington</i> sub-district to that of <i>Billinghay</i> . The name of the enlarged <i>Heckington</i> sub-district was subsequently altered to that of <i>Sleaford</i> .
434	BINGHAM - - -	" -	The sub-districts of <i>Bingham</i> and <i>Ratcliffe-on-Trent</i> were united under the name of <i>Bingham</i> (aggregate population 14,721).
468	ASHTON-UNDER-LYNE -	1 January -	The sub-districts of <i>Dukinfield</i> and <i>Staley</i> were united under the name of <i>Dukinfield</i> (aggregate population 38,573). That part of the <i>Ashton Town</i> sub-district known as "The Stakes" was transferred to the <i>Hartshead</i> sub-district. That part of the <i>Audenshaw</i> sub-district known as "Walkmill" (population 1,270) was transferred to the <i>Ashton Town</i> sub-district.
586	CARDIFF - - -	" -	The parish of Llanilterne (population 118) was transferred from the sub-district of <i>St. Nicholas</i> to that of <i>Whitchurch</i> .

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

NOTE.—The Population enumerated at the Census of 1860 was 15,073,536. The estimated Population for subsequent Years has been deduced from the Excess of Births over Deaths registered in each Year. The facts for the five years 1871-5 were not collected owing to the disturbed state of the country; those for the year 1877 and for the years 1879-82 have not yet been finally dealt with. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

* Census year.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1872.

* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or less from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of the Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Abstract of Marriages, 1883.

the Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1883.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are classified in these Abstracts as bachelors and spinsters.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† 1. The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

* 1. The District of Kensington comprises the two Poor Law Unions of Faddington and Kensington.

Abstract of Marriages, 1883.

7

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendents Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

* The Superintendent Registrars' Districts (530 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2154 in number at the end of the year 1883) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1883 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

* 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llandfrydog, and Amlwch Sub-districts) and Holyhead (Bryngwran, Llanddausaint, and Holyhead Sub-districts).

The parishes of Bodewryd and Rhosbeiro, however, situated in Llanddausaint Sub-district belong to the Union of Anglesey, and not to the Union of Holyhead.

DEATHS IN PUBLIC INSTITUTIONS.

1883.

THE following pages contain the numbers of deaths registered during 1883 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1549 Institutions; of which 726 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 737 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1549 Institutions 55,681 deaths were registered during the year, or 10·6 per cent. of the total deaths in England and Wales, against 10·8 and 10·2 per cent. in the two preceding years; 35,477 occurred in Workhouses, 15,291 in Hospitals, and 4,913 in Lunatic Asylums. The proportion to total deaths was 63·7 per cent. in Workhouses, 27·5 in Hospitals, and 8·8 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

Deaths registered in the Public Institutions of England in the Year 1883.

* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures are therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information obtained.

Of the above 11,588 ACCIDENTS, 93 are stated to have occurred to Persons in a state of INTOXICATION and 4 to Persons suffering from DELIRIUM TREMENS. And in 275 other cases Death was caused by the supervention of Erysipelas, MORTIFICATION, PYÆMIA, or TETANUS. Here follow details:—

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *comp names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will found under the letter E, and not under G; St. James under the letter S, and not as "James, St." number against each Sub-District, in the third column, refers to its numerical place in the Table Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	NO.	SUB-DISTRICT.	DISTRICT.	NO.	SUB-DISTRICT.	DISTRICT.	NO.

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-SIXTH ANNUAL REPORT.

	PAGES
ACCIDENT ; Deaths by, largely affected by diversities of occupation . . .	xx
deaths from, at various Ages	211-217
AGES ; Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows, 1867-83. (Table C.)	viii-ix
Of 10,000 Marriages the Numbers of Males and of Females married at successive age periods in European countries. (Table D.)	x
Minors married in 1883, and the per-centage to total marriages	xi
at Death	xiii
Death-rates at successive age periods, in 1883	xiii
and Sex-distribution of the English people in 1881, per 1000 persons. (Table Note*.)	xiii
Deaths under one year	xiv
Deaths over 100 years	xiv
at Death, of Males and Females in each year, 1838-83. (Tables 19, 20.)	xlviii-xlix
Mortality of Males and Females at 12 groups of, 1838-83. (Tables 21-23.)	l-lii
Mortality in Counties, at 12 groups of, in 1883. (Table 25.)	liv
of 353,604 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows	26-28
at Death, of Males and Females registered in Divisions, Counties, and Districts	115-136
at Death, of Males and Females from different Causes	137-145
at Death, of Males and Females, in London, from different Causes . .	146-153
ALCOHOLISM ; increase of, probably only apparent	xvii
AREA in Acres and Hectares of the United Kingdom and its parts. (Table 50.)	lxxxii
in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 52.)	lxxxiii
in Acres of each Division, County, and District	2-24
in Acres of each District and Sub-district	32-91
ARMY ; Strength and Mortality of, in 1883	xxii
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1864-83. (Table 53.)	lxxxiv
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 54.)	lxxxiv
Nationality of, in 1861-71-81. (Table 55.)	lxxxiv
Death-rate at Home and Abroad in each Year, 1861-83. (Table 56.)	lxxxv
Deaths in, in each Year, 1861-83, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 57.)	lxxxv

AURORA BORREALE in 1883	PAGES xxvii
AUSTRIA; of 10,000 Marriages the Numbers of Males and Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death-rates in each Year, 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-83. (Table 75.)	civ
ATMOSPHERIC PRESSURE in 1883	xxv
BANKERS' CLEARING HOUSE; amount cleared per head of population, 1868- 83. (Table A.)	vi
BAVARIA; of 10,000 Marriages the Numbers of Males and of Females married at successive Age Periods. (Table D.)	x
BELGIUM; of 10,000 Marriages the Numbers of Males and of Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death-rates in each Year, 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-83. (Table 81.)	cvi
BIRTHS in 1883	xii
Sex proportions of	xii
Illegitimate, Proportion to total Births and to Population	xiii
of British Subjects at Sea	xxiii
registered, and excess over Deaths, in each Year, 1838-83. (Table 1.)	xxx
in each Quarter of the Years 1838-83. (Table 12.)	xli
in each Year 1838-83; Legitimate and Illegitimate in 1842 and 1845-83, and Proportion of Males and Females. (Table 13.)	xlii
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1873-83, and the mean of 10 Years, 1873-82. (Table 15.)	xliv
proportion of Males and Females born in Counties in each Year, 1873-83, and the mean of 1873-82. (Table 16.)	xlv
in the United Kingdom and its parts. (Table 50.)	lxxxii
in the Islands in the British Seas, in each year 1861-83. (Table 52.)	lxxxiii
of British Subjects at Sea in each Year, 1856-83. (Table 59.)	lxxxvi
in European countries. (Table 70-84.)	ci-cviii
in Divisions and Counties, distinguishing sex, Legitimate and Illegitimate	30-31
in Divisions, Counties, Districts, and Sub-districts, distinguishing sex, Legitimate and Illegitimate	30-91
excess over Deaths, in Divisions, Counties, Districts, and Sub- districts	30-91
Illegitimate. (See ILLEGITIMATE BIRTHS.)	
BIRTH-RATE in 1883 the lowest since 1853	xii
disparity in several Counties	xii
Illegitimate, slight decline of	xiii
in each Year, 1833-83, and the mean of 46 Years. (Table 2.)	xxxi

BIRTH-RATE—continued.

means of 46 years 1838-83, and of decennial and quinquennial periods 1838-80. (Table 3.)	xxxii
in each Quarter of the Year 1838-83. (Table 12.)	xli
in each Year, 1838-83, and Legitimate and Illegitimate rates in 1842 and in 1845-83. (Table 13.)	xlii
in Counties in each Year 1873-83, and the mean of 1873-82. (Table 14.)	xliii
in the United Kingdom and its several parts. (Table 51.) . . .	lxxxii

BRAIN DISEASES, increased mortality from, in 1883	xix
(See CAUSES of DEATHS Tables.)	

BRONCHITIS. (See CAUSES of DEATHS Tables.)

BUILDINGS registered for the Solemnization of Marriages. (Table 11, p. xl.)	xii

BURNS AND SCALDS. (See CAUSES of DEATHS Tables.)

CANCER, progressive increase of mortality from, since 1851	xviii
Increase amongst Males greater than amongst Females	xviii
(See also CAUSES of DEATHS Tables.)	

CAUSES of DEATH; Registered	xv
Mortality from the various Classes, 1883. (Table G.)	xv
Ill-defined and Non-specified	xxi
Certification of, by Medical Practitioners and Coroners	xxi
further decline of uncertified Causes in 1883	xxi
in the Navy in 1883	xxii
in the twenty-four years 1860-83. (Table 27.)	lvi-lvii
Mortality from, to 1,000,000 persons living in the twenty-four years 1860-83. (Table 28.)	lviii-lix
Mean annual mortality from various causes to 1,000,000 living, in groups of ages, in quinquennials 1858-80, and in 1881-82-83. (Table 29.)	lx-lxi
Mortality from certain, in Counties, in 1883. (Table 34.) . . .	lxvi-lxvii
of Males and Females in 1883; Deaths from each Cause to 1,000,000 living of each Sex. (Table 35.)	lxviii
proportional Number dying from each Cause. (Table 36.) . . .	lxix
of 63 reputed Centenarians in 1883. (Table 47.)	lxxix
in England, at different Periods of Life, Males and Females. . .	137-145
in London at different Periods of Life of Males and Females . .	146-153
in each of the Registration Counties, Males and Females . . .	154-177
and Inquest Cases in Divisions, Counties, and Districts . . .	178-210
Accidental, Suicidal, and Homicidal.	211-223

CENTENARIANS; Deaths of reputed	xiv
Occupations, Ages at, and Causes of Death in 1883. (Table 47.) .	lxxix

CERTIFIED PLACES OF WORSHIP; Aggregate Number in 1883; the Number registered; and Certificates cancelled during the Year	xii

CERTIFICATION of the Causes of Death	xxi

CHANGES in the Constitution of Districts in 1883. (Table 69.) . .	xcix-c

CHICKEN-POX; mortality from, in 1883	xv

CHILD BIRTH ; Mortality from, varies much in different industrial localities	PAGES
Deaths referred to, in each Year, 1847-83. (Table 41.)	xxx
Deaths referred to, and Mortality of Mothers per 1,000 Children born alive, in Counties. (Table 42.)	lxxiii
Deaths at different Ages of Women after Childbearing, assigned to other Causes than Childbirth or Puerperal Fever. (Table 43.)	xxiv
Deaths from various causes, of Women returned as pregnant. (Table 44.)	lxxv
CHILDREN ; Deaths and Death-rates, of Males and Females in each year 1838-83. (Tables 19-23.)	lxxvi
under One Year of Age, Mortality among, in Counties in each Year, 1873-83. (Table 26.)	xlviii-lv
Mortality of Infants under One Year of Age to 1000 births, in each Year 1838-83. (Table 31.)	lv
Ditto in London. (Table 33.)	lxiii
CIRCULATORY ORGANS ; increase of Mortality from Diseases of	lxv
(See CAUSES of DEATHS Tables.)	xix
COALS ; Average price of, in each Year 1852-83, and in each Quarter of 1876-83. (Table 48.)	lxxx
CONSOLS ; average price of, 1852-83, and in each Quarter of 1876-83. (Table 48.)	lxxx
CONSTITUTIONAL DISEASES ; Deaths from in 1883, and Mortality in 1881-82-83, and mean mortality of, 1871-80. (Table G.)	xv
remarks upon	xviii
CONVULSIONS ; deaths from in 1883, the fewest recorded	xix
COW-POX ; mortality in 1883	xvi
CROUP . (See CAUSES of DEATHS Tables.)	
DEATHS in 1883	xlii
as affected by the Ages of the Population	xlii

DENMARK; of 10,000 Marriages, the Numbers of Males and Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death Rates in each Year 1866-82. (Table 70.)	ci
Estimated Population; Number and Proportion to Population of Persons married, of Births, and of Deaths in each Year, 1850-82. (Table 72.)	cii

	PAGES
DENSITY; Persons to a square Mile in each Year, 1851-83. (Table 45.)	lxxvii
Acres and Hectares to a Person in the United Kingdom and its Parts. (Table 51.)	lxxxii
DEVELOPMENTAL DISEASES; Deaths in 1883, and Mortality from in 1881, 1882, and 1883. (Table G.)	xv
remarks upon	xix
DIABETES; increase of Mortality from, probably apparent and due to improved certification	xviii
(See CAUSES of DEATHS Tables.)	
DIARRHOEA; low Mortality from in 1883	xvii
(See CAUSES of DEATHS Tables.)	
DIETIC DISEASES; Deaths in 1883, and Mortality from in 1881, 1882, and 1883. (Table G.)	xv
remarks upon	xvii
DIPHTHERIA; increase of Mortality from, unusually great in 1883	xvi
Mortality from, amongst Males and Females	xvi
(See also CAUSES of DEATHS Tables.)	
DISTRICTS; changes in the constitution of, in 1883. (Table 69.)	xcix
Alphabetical Index of	224-227
DIVORCE; remarriages of Divorced Persons in 1883	viii
DROPSY. (See CAUSES of DEATHS Tables.)	
DROWNING. (See CAUSES of DEATHS Tables.)	
EDUCATION, increased diffusion of, as shown by Signatures in Marriage Registers. (Table E.)	xi
EMIGRATION and IMMIGRATION in 1883 and their effect upon Population	v
from the United Kingdom, with the Destinations of the Emigrants, in each Year 1871-83. (Table 67.)	xcviii
Number and Destination of Emigrants of English Origin in each Year 1871-83. (Table 68.)	xcviii
ENGLAND AND WALES; of 10,000 Marriages, the Number of Males and Females married at successive Age Periods. (Table D.)	x
Area in Acres and Hectares; estimated Population, and Marriages, Births, and Deaths. (Table 50.)	lxxxii
Density, and Marriage, Birth and Death Rates. (Table 51.)	lxxxii
Number and Proportion of the British Army recruited from. (Table 55.)	lxxxiv
Deaths in the British Army abroad of Officers and Men belonging to, in each Year, 1861-83. (Table 57.)	lxxxv
Population, Persons, Males, and Females, estimated to the middle of each Year, 1801-85. (Table 66.)	xciv-xcvi
Population, Number, and Proportion per 1,000, of Persons married, of Births, and of Deaths, in each Year. 1853-83. (Table 71.)	cii
EUROPEAN STATES; of 10,000 Marriages, the Numbers of Males and Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death Rates in 1883	xxiii
Annual Rates per 1,000 of Persons married, of Births, and of Deaths, for series of Years. (Tables 70-84.)	ci-cviii
EXECUTIONS; and Ages at	138-139
in London	146-147
EXPORTS; Value of, per head, compared with Imports and Marriage-rates, 1860-83. (Table A.)	vi

FEVER ; Decline of mortality from	xxviii
Deaths from, at several Groups of Ages in each Year, 1867-83. (Table 38.)	lxvi
Deaths and Mortality from, in each Year, 1850-83. (Table 39)	lxvi
Deaths from, in Counties, in each Year, 1873-83, and average number, 1873-82. (Table 40.)	lxvii
(See also CAUSES of DEATHS Tables.)	
Fog in 1883	xxvii
FRANCE ; of 10,000 Marriages, the Numbers of Males and Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death Rates, in each Year, 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year 1853-83. (Table 82.)	cvi
GERMANY ; Marriage, Birth, and Death Rates, in each Year, 1872-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1872-83. (Table 78.)	cv
GLAISHER, JAMES, Esq., F.R.S. ; remarks upon the Meteorology of 1883, with Tables	xxv, lxxxviii-xciii
GOUT. (See CAUSES OF DEATHS Tables.)	
GREAT BRITAIN ; Area in Acres and Hectares ; Estimated Population, and Marriages, Births, and Deaths. (Table 50.)	lxxxii
Density, and Marriage, Birth, and Death Rates. (Table 51.)	lxxxii
GUERNSEY. (See ISLANDS in the BRITISH SEAS.)

Proportion of the Army recruited from. (Table 55.)	lxxxiv
Estimated number of Deaths in the Army of Irish soldiers, 1861- 83. (Table 57.)	lxxxv
Population, Persons, Males and Females, estimated to the middle of each Year, 1801-1885. (Table 66.)	xcv-xcvi
ISLANDS in the BRITISH SEAS; Births and Deaths in each Year 1851-83, Population at each Census 1851-61-71-81, and Area in Acres. (Table 52.)	lxxxiii
ITALY; of 10,000 Marriages the Numbers of Males and Females married at successive Age Periods. (Table D.)	
Marriage, Birth, and Death-rates in each Year 1866-83. (Table 70.)	
Estimated Population; Number, and Proportion to Population, of Persons Married, of Births, and of Deaths, in each Year 1864-83. (Table 84.)	cviii
JERSEY. (See ISLANDS in the BRITISH SEAS.)	
LEGITIMATE BIRTHS. (See BIRTHS.)	
LIVER DISEASES; declining mortality from, in recent years	xvii
LOCAL DISEASES; Deaths from in 1883 and Mortality from, in 1881, 1882, and 1883. (Table G.)	xv
remarks upon	xix
LONDON; Mortality from the principal Zymotic Diseases, and Infant Mortality in each year, 1838-83. (Tables 32, 33.)	lxiv-lxv
Marriages in	2-3, 6-7
Births in, Legitimate and Illegitimate	30, 32-35
Deaths in	30, 32-35, 94, 96, 97
Causes of Death of Males and Females at different Ages	146-153
Deaths from several causes, and Inquests	178-188
LUNATIC ASYLUMS; Deaths in. (See INSTITUTIONS.)	
MAN, ISLE OF. (See ISLANDS in the BRITISH SEAS.)	
MANSLAUGHTER; Deaths from, at different Ages, Males and Females	222-223

MAIRIE REGISTER BOOK ; entries in, during 1883	PAGES xxxii
MARKS ; Signatures by, in the Marriage Registers	xi
Signature by, per 100 marriages and comparative decline of Signatures by, in Marriage Registers, during each decennium 1843-83. (Table E.)	xi
Counties in which the proportion of Signatures by, was respectively highest and lowest	xi-xii
Signatures by, in Marriage Registers, in each Year 1841-83. (Table 6.)	xxxv
Proportions of Signatures by, of Males and Females, in each Year 1841-83. (Table 7.)	xxxvi
Proportions of Signatures by, of Males and Females, in Counties in 1883. (Table 10.)	xxxix
MARRIAGES in 1883	vi
forms of celebration of	vii
in the Established Church, and the proportions per cent. by Special License, License, Banns, and by Certificate, in Quinquennials 1841-80, and in 1881, 1882, and 1883. (Table B.)	vii
in other places than the Established Church	viii
and Re-marriages, Males and Females	viii
Re-marriage after Divorce	viii
Ages at in 1883, and Mean Age at, of Persons of each Civil Condition in each Year, 1867-83. (Table C.)	viii-ix
in Russia solemnized at an early age	ix
of 10,000 Marriages, the Numbers of Males and Females married at successive Age Periods in European States. (Table D.)	x
of Minors in 1883	xi
Register, Signatures in, showing decline of illiterate Marriages. (Table E.)	xi
Buildings registered for Solemnization of	xii
registered in each Year, 1838-83. (Table 1.)	xxx
in each Year 1841-83, solemnized according to, and not according to, the rites of the Established Church. (Table 4.)	xxxiii
Proportion per cent. by License, Banns, Certificate, Civil Rites, and Not stated, in each Year 1841-83. (Table 5.)	xxxiv
civil condition of Persons married ; number of Minors married, and of Signatures by Mark. (Table 6.)	xxxv
in each Year 1841-83 ; proportions of Minors, of Signatures by Mark, and of Re-marriages, distinguishing Sex. (Table 7.)	xxxvi
in each Quarter of the Years 1838-83. (Table 8.)	xxxvii
in Counties in 1883 ; showing the proportions of Signatures by Mark, of Minors, and of Re-marriages, to Total Marriages of Men and Women. (Table 10.)	xxxix
Number and Classification of Buildings registered for the solemnization of, in 1883, in England, its Divisions and Counties. (Table 11.)	xl
aggregate number of Names of Persons married on the Index at the end of each year. (Table 49.)	lxxxi
in the United Kingdom and its parts. (Table 50.)	lxxxii
in European States. (Tables 70-84.)	ci-cviii
in Divisions, Counties, and Districts ; distinguishing the form, and whether according, or not according to, the Rites of the Established Church ; the seasons of Marriage, conjugal Condition, Minority, and Signature of the Register by Marks	2-25
Ages of 853,604 Persons Married, distinguishing Bachelors, Spinsters, Widowers, Widows	26-28

	PAGES
MARRIAGE-RATE; partial recovery of, in recent years	vi
fluctuations in, compared with fluctuations in value of Exports, Imports, Wheat, and Banking. (Table A.)	vi
Counties in which there was no recovery, and those in which it was greatest	vi-vii
higher in England than in other European States	ix
in each Year 1838-83, and the Mean of 46 Years. (Table 2.)	xxxi
Mean of 46 Years, and of decennial and quinquennial Periods 1838-80. (Table 3.)	xxxii
in each Quarter of the Years 1838-83. (Table 8.)	xxxvii
in Counties in each Year 1873-83, and Mean of 10 Years 1873-82, (Table 9.)	xxxviii
in the United Kingdom and its several parts. (Table 51.)	lxxxii
in European States. (Tables 70-84.)	ci-cviii
MEASLES; below the average in 1883	xvi
(See also CAUSES of DEATHS Tables.)	
MEAT; Average Prices of Beef and Mutton, in each Year 1852-83, and in each Quarter 1876-83. (Table 48.)	lxxx
MERCANTILE MARINE; Strength and Mortality of, in 1883	xxiii
MERCHANT SEAMEN. (See SEAMEN.)	
METEOROLOGY of 1883; Remarks upon, by James Glaisher, Esq., F.R.S.	xxv-xxvii
Mean Annual Value of Meteorological Elements in 1883 at 38 stations of Observation. By James Glaisher, Esq., F.R.S. (Table 61.)	lxxxviii-lxxxix
Mean Annual Values of Meteorological Elements in 1883 for different Parallels of Latitude. (Table 62.)	xc-xci
of Greenwich, in each Year 1849-83. (Table 63.)	xc-xci
Greenwich Monthly in 1883. (Table 64.)	xcii-xciii
Greenwich Quarterly in 1883. (Table 65.)	xcii-xciii
MINORS; large proportion of Marriages of, in Russia	ix
Proportion of Males and of Females per 1,000 Marriages, in European States. (Table D.)	x
married in 1883, and the per-centage to total Marriages	xi
Number and Sex married in each Year 1841-83. (Table 6.)	xxxv
Percentage of, Persons, Males and Females, married in each Year, 1841-83. (Table 7.)	xxxvi
proportional Numbers of each sex married in Counties in 1883. (Table 10.)	xxxix
MINES; Deaths from Violence in. (See VIOLENT DEATHS.)	
MURDER; Deaths of Males and Females from, at different Ages	220-221
NAVY; Strength of and Mortality and Causes of death in, in 1883	xxii
Mortality in the Service afloat in each year 1856-83. (Table 58.)	lxxxvi
NETHERLANDS, THE; of 10,000 Marriages, the Numbers of Males and of Females married at successive Age Periods. (Table D.)	x
Marriage, Birth, and Death-rates in each Year 1866-83. (Table 70.)	ci
Estimated Population; Number, and Proportion to Population, of Persons Married, of Births, and of Deaths in each Year 1853-83. (Table 80.)	cvi

MARRIAGES Registered in England in Registration Divisions, Counties, and Districts; distinguishing those according and those not according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks	2-25
AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows	26-28
LEGITIMATE and Illegitimate Births, Male and Female Deaths, and Excess of Births over Deaths, in Registration Divisions, Counties, Districts, and Sub-districts; distinguishing the Sexes of the Legitimate and Illegitimate Births in Divisions and Counties	29-91

REPORT

TO

The Right Honourable JOSEPH CHAMBERLAIN, M.P.,
President of the Local Government Board, &c. &c.

General Register Office, Somerset House,
31st March, 1886.
(1884.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the births, marriages, and deaths that were registered in England and Wales in the year 1884, with a report on the main features of the vital statistics of that year.

Increase of Population.—The numbers of births and deaths registered in the year were respectively 906,750 and 530,828, so that the natural increment of the population, or excess of births over deaths, was 375,922, and equal to 1·39 per cent. of the estimated population at the beginning of the year. The population of England and Wales, as enumerated in April 1881, numbered 25,974,439 persons. The excess of births over deaths from that date to the middle of 1884 was 1,240,423; so that the population at the later date, if its growth were determined simply by the balance between births and deaths, would have been 27,214,862. This, however, takes no account of emigration and immigration; and, as there are no data for determining with accuracy the balance between these two factors, the best method of estimating the population is to assume that the rate of growth which existed in the last intercensal period has been maintained in the years that have elapsed since its close. On this, which is the usual hypothesis, the population of England and Wales in the middle of 1884, consisted of 27,132,449 persons, of whom 13,203,423 were males, and 13,929,026 were females. It is on this population that the rates in this report have been calculated.

MARRIAGES.

The marriages registered in 1884 numbered 204,301, giving a rate of 15·1 persons married to 1000 living. This was a slightly lower rate than in either of the two immediately preceding years, in which the rates were 15·5 and 15·4 respectively. This successive decline since 1882, small though it was, is noteworthy, as the rate in 1882 was already extremely low. For eight successive years, 1877–84, the marriage rate was lower than any recorded since 1843.

The following Table shows that the fall in the marriage-rate in 1884 was accompanied, as has been usually the case in recent years, by a fall in the value of British Exports, and in the average price of wheat. There

was also a fall in the amount, per head of population, cleared at the London Bankers' Clearing House.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS AND IMPORTS, PRICE OF WHEAT, and amount cleared at the Bankers' Clearing House, 1860-84.*

1884	15.1	6 9 7	10 16 11	19 1 6	35 8	214

* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are calculated upon the population of England and Wales, and are also derived from the Board of Trade Statistical Abstracts.

Forms of Marriage.—Of the 204,301 marriages celebrated in 1884, 144,344, or 70.7 per cent. were solemnised according to the rites of the Established Church, and 59,957, or 29.3 per cent., otherwise. Comparison with the figures for former years (Table 5) shows that the above proportions indicate another step in the almost uninterrupted decline of Church marriages since civil registration began. The following Table shows what proportion of the marriages in the Established Church were by licence, banns, and Superintendent Registrar's certificate, respectively. The figures show a further decrease in the proportion of marriages by licence, and a further increase in the proportion of those by banns, which has been rising continuously since 1856-60.

TABLE B. — OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, Banns, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-84.

„ 1884 . .	100	·05	8·47	89·04	2·44

* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 458 of the Church marriages in 1884 the particulars required for the accurate construction of the above Table were not entered in the registers by the officiating clergyman. This was, however, a smaller number of omissions of these particulars than in any previous year. (Table 4.)

Of the 59,957 marriages not according to the rites of the Established Church, 8783 were solemnised in Roman Catholic places of worship, 61 were marriages according to Quaker rites, and 23,726 were solemnised in the chapels of other Christian communities; while 601 were marriages of Jews, and 26,786 were civil marriages in the offices of the Superintendent Registrars.

As compared with the immediately preceding year 1883, there was a decline of 1·81 per cent. in Church marriages, and of 2·19 per cent. in Roman Catholic marriages; while there was an increase of 2·00 per cent. in Nonconformist marriages, of 11·50 per cent. in Jewish marriages, and of 0·90 in purely civil marriages.

First Marriages; Re-marriages. Males.—Of the 204,301 men who married in 1884, 178,467,* or 87·4 per cent., were bachelors, while 25,834 or 12·6 per cent., were widowers.

Of the 178,467 bachelors, 170,390, or 95·5 per cent., married spinsters, while 8077, or 4·5 per cent., married widows.

Of the 25,834 widowers who re-married, 15,714, or 60·8 per cent. married spinsters, while 10,120, or 39·2 per cent., married widows.

Females.—Of the 204,301 women who married in 1884, 186,104,* or 91·1 per cent., were spinsters, while 18,197, or 8·9 per cent., were widows.

* The 66 divorced men who re-married in the year are here reckoned as bachelors, and the 54 divorced women who re-married are reckoned as spinsters.

Of the 186,104 spinsters who married, 170,390 or 91·6 per cent., married bachelors, while 15,714, or 8·4 per cent., married widowers.

Of the 18,197 widows who re-married, 8077, or 44·4 per cent., married bachelors, while 10,120, or 55·6 per cent., married widowers.

It is curious to note that though there was a falling off, as compared with the previous year, in the marriages of bachelors, of spinsters, and of widows, there was exceptionally a rise of 1·10 per cent. in the marriages of widowers.

Marriages of Divorced Persons.—The number of persons married in the year who were described as divorced was 120, and consisted of 66 men and 54 women. Of the 66 men, 51 married spinsters, 13 married widows, and 2 married divorced women. Of the 54 women, 39 married bachelors, 13 married widowers, and 2 married divorced men.

Ages at Marriage.—In 22,483, or 11·0 per cent., of the marriages, the age of one or of both of the contracting parties was not inserted in the register. The mean age at marriage of the remaining 181,818 couples was 28·0 for the men and 25·8 for the women. The mean age of the bachelors was 26·0 and of the spinsters 24·5; the mean age of the widowers was 43·6 and of the widows was 40·1. The mean age in each of the four groups was the highest as yet recorded; the lowest having been, both for bachelors and for spinsters, in 1873, when the marriage-rate was at its maximum. In prosperous times both men and women marry early, and the rate is high; in times of depression marriage is deferred and the rate is low.

Of the men who married, 7·25 per cent. were under 21 years of age, a lower proportion than in any year since 1869; and of the women who married 21·34 per cent. were under age, this proportion being, with one exception, the lowest since 1868. (Table 7.)

Among the minors who married were three girls of the age of 14, and one of the age of 13; while among the marriages at the other extreme of life was that of a widower who re-married at the ripe age of 92.

Signature in Marriage Register.—Of the males who married in the year, 11·7 per cent., and of the women 14·2 per cent., were unable to sign their names in the register. These proportions, which are the lowest on record, testify to the rapid and continuous advance of elementary education. The improvement has been somewhat more rapid in the female than in the male sex; for while the proportion of illiterate brides has diminished by 50 per cent. in 17 years, it has taken 20 years to effect a similar reduction in the proportion of illiterate bridegrooms. (Table 7.) The women, however, still remain a considerable way behind the men from an educational point of view. The proportion of illiterate men was above 20·0 per cent. (Table 10) in Suffolk, Staffordshire, and Monmouthshire; while the proportion of illiterate women exceeded that limit in Bedfordshire, Staffordshire, Lancashire, Durham, Monmouthshire, and in North and South Wales.

Certified Places of Worship.—The number of places of worship (not belonging to the Established Church) on 31st December 1884, certified under Acts 15 & 16 Vict. c. 36, and 18 & 19 Vict. c. 81, was 23,438. During the year 770 new buildings were registered, while 125 were removed from the register by cancellation; the net increase during the year was therefore 645.

Buildings registered for the Solemnisation of Marriages.—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1884, was 9377 (see Table 11), showing an increase of 207 during the year.

BIRTHS.

The births registered in the year numbered 906,750, and were in the proportion of 33·4 to 1000 persons living. The proportion in the immediately preceding year had been 33·3, but, with this single exception, the rate was the lowest recorded in any year since 1853, when it was also 33·3. (Table 13.)

The rate was below 29·0 in Sussex, Huntingdonshire, Herefordshire, Shropshire, Rutlandshire, and North Wales; while it was above 36·0 in Essex, Staffordshire, Nottinghamshire, Durham, Northumberland, and Monmouthshire; the lowest rates, as usual, being in agricultural, and the highest in industrial and mining districts. (Table 14.)

Sex.—The male births numbered 462,481, and the female births numbered 444,269, the former being to the latter in the proportion of 104·1 to 100, the mean proportion having been 103·8 to 100 in the preceding decennial period. (Table 16.) The increase in the proportion of male to female births is noteworthy, inasmuch as for some unexplained cause the proportion had previously fallen in recent years.

Illegitimate Births.—The infants registered in the year as born out of wedlock numbered 42,667, and were in the ratio of 1·6 to 1000 persons living. The ratio had been precisely the same in each of the two immediately preceding years, and lower than any previously recorded. Down to 1865 the illegitimate birth-rate (Table 13), was almost constant, but from that date downwards there has been a steady decline.

The counties in which the proportions of illegitimate to total births were the highest were (Table 15), as usual, Shropshire, Cumberland, Westmorland, and Norfolk, in which counties the proportion varied from 7·0 to 8·5 in the hundred; while in the whole of England and Wales it was 4·7, so that in round numbers, one child out of 21 was born out of wedlock.

DEATHS.

The deaths registered in the year numbered 730,828, and were in the proportion of 19·6 to 1000 persons living. This was the fourth consecutive year in which the death-rate was under 20·0 per 1,000, whereas in no single previous year since civil registration began had the rate fallen to that level. (Tables 2 and 17.)

It is sometimes suggested that the remarkable decline of mortality in recent years cannot unhesitatingly be ascribed to any improvement in the sanitary condition of the country, but may not improbably be accounted for by a series of years of favourable meteorological character, and notably by the absence of excessively cold winters and excessively hot summers. But, without stopping to inquire whether in fact there has been such a continuous succession of mild winters and summers, it may be pointed out, as scarcely compatible with the suggested explanation, that the decline of mortality has been common to all four quarters of the year, and shared by them in pretty equal degrees; so that, in order to give consistency to the suggested explanation, it would be necessary to assume a succession of years in which all four quarters alike, spring, summer, autumn, and winter, were marked by gradually improving meteorological conditions, an improbable supposition for which there is no apparent warrant. This is shown very plainly in the following Table, which gives the mean annual death-rates, as based on the deaths in the several quarters, in successive periods of years. It will be noted that there has been a

decline, and with one trifling exception a continuous and unbroken decline, in the mortality of each quarter ; and further that the decline, as shown in the bottom line, has been practically equal in each of the four quarters.

TABLE C.—MEAN ANNUAL MORTALITY per 1,000 in the several Quarters, in Successive Periods.

Period.	1st Quarter.	2nd Quarter.	3rd Quarter.	4th Quarter.
1838-70 - - -	25.0	22.1	20.6	21.9
1871-75 - - -	24.8	21.1	20.4	22.1
1876-80 - - -	23.2	20.7	18.9	20.6
1881-84 - - -	21.2	19.1	17.8	19.5
Decline per cent. in } 1881-84 as compared } with 1838-70.	15.2	18.6	13.6	11.0

Sex.—Of the deaths registered in the year, 273,522 were of males and 257,306 of females, giving a male death-rate of 20.72 and a female death-rate of 18.23 per 1,000 living, against an average annual rate in the preceding ten years of 21.98 for males and 19.48 for females. The male rate was therefore 5.7, and the female rate 6.4, per cent. below the average in the ten preceding years. Out of equal numbers living there were 1137 deaths of males to 1000 deaths of females; the proportion in the preceding ten years having averaged 1128 to 1000. The difference is but small; it will, however, be noted on looking at the figures for a long series of years (Table 17), that the contrast between the male and female mortality has been gradually becoming more and more unfavourable to the former sex, probably because the increasing strain of competition tells more heavily upon men than upon women.

Ages.—The female death-rates were below the average (Table 22) at every age-period; while the male death-rates were somewhat above the average (Table 21) between 45 and 75 years of age, but below the average in the remaining periods of life. Moreover, the excess of the male rates in the periods between 45 and 75 years of life was inconsiderable, and less than in the immediately preceding year, 1883.

There appears to have been a recovery in the years of the current decennium (1881-84) from the remarkably high mortality of males, 45 years of age and upwards, that distinguished the preceding decennium, 1871-80, and that was especially noticeable in the first half of that decennium. Thus, if we compare (Table 23) the mean death-rates of males in the first four years of the present decennium with the corresponding means in the quinquennium 1871-75, we find that the rate at 45-55 years of age fell from 20.7 to 19.4, at 55-65 from 35.0 to 33.7, at 65-75 from 70.9 to 68.1, at 75-85 from 151.9 to 143.2, and at 85 and upwards from 335.2 to 291.5. It is a problem of much interest, but for which it is difficult to find an adequate solution, why the mortality of adult males should have risen so considerably in the last decennium, notwithstanding the still more considerable decline of mortality at earlier life-periods, and why, having thus risen, it should again have fallen in the first four years of the current decennium.

Infant mortality.—The deaths of infants in the first year of life numbered 133,128, and were in the proportion of 147 deaths to 1000 live-born children, the proportion in the immediately preceding ten years having been 144. (Table 26.)

The infantile death-rate was lowest in Dorsetshire and in Westmorland, and was under 110 in Hampshire, Berkshire, Oxfordshire, Wiltshire, Herefordshire; while it was as high as 161 in Staffordshire, 162 in the West Riding, 173 in Nottinghamshire and in Lancashire, 180 in Leicestershire; and also exceeded 150 in Durham, the East Riding, Warwickshire, and in London; the contrast, as usual, being very marked between the rural and the industrial or mining parts of the country.

Centenarians.—Among the registered deaths were 58 of reputed centenarians, of whom 18 were of the male and 40 of the female sex. (Table 47.) Of the 58 persons, 42 were stated to have been 100 or 101 years old, but 5 claimed to have reached 102, 4 to have reached 103, 3 to have reached 104, 2 to be 105, one to be 106, one to be 108, and one woman to be no less than 110. The number of claims to centenarian honour has fallen steadily year by year for some time past; as education becomes more generally diffused, there is an increasing unwillingness to accept statements of marvellous longevity without substantial evidence.

Urban and Rural Mortality.—The death-rate in the urban population, that is to say, in those districts and sub-districts that comprise the chief towns, and that have between them a population of some sixteen millions, was 20·9 per 1000, while the death-rate in the remaining and comparatively rural parts of England and Wales, with nearly eleven millions of inhabitants, was 17·4 per 1000. (Table 45).

As has been explained in previous reports, the difference between these rates very inadequately represents the difference of healthiness of town and of country; for, owing to the great differences of age and sex distribution of the respective populations, the urban death-rate, with equal healthiness, ought to be nearly 11 per cent. lower than the rural death-rate; whereas it was in fact 20·1 per cent. above it.

The urban mortality is invariably higher than the rural mortality in each quarter of the year. (Table 46). The difference, however, is by no means the same in each of the four quarters, and is found on an average to be least in the second or spring quarters, and highest in the third and fourth quarters. Thus, in the ten years, 1874–83, if the mean rural mortality in each quarter be represented as 100, the urban mortality was in the four successive quarters, beginning with the first, 116, 112, 128, and 127.

REGISTERED CAUSES OF DEATHS.

The assigned causes of death were distributed as follows in the several classes:—

TABLE D.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1884.	Rate per Million living.				
		1884.	1883.	1882.	1881.	Mean 1871–80.
Zymotic diseases - -	84,196	3,101	2,639	3,088	2,660	3,257
Parasitic diseases - -	1,049	38	39	37	39	57
Dietetic diseases - -	1,576	58	66	68	65	63
Constitutional diseases - -	92,622	3,413	3,407	3,395	3,328	3,597
Developmental diseases - -	42,807	1,578	1,632	1,558	1,583	1,676
Local diseases - -	259,618	9,567	9,890	9,591	9,348	9,928
Violence - -	17,695	652	675	669	697	737
Ill-defined and not specified causes - -	31,265	1,157	1,188	1,154	1,160	1,611
All causes - -	530,828	19,564	19,536	19,560	18,880	21,396

Zymotic or Specific Febrile Diseases.—The deaths ascribed to this class of diseases were 84,196, being in the proportion of 3101 to a million persons living, a proportion which, as shown in Table D., was somewhat higher than in any of the three immediately preceding years, but lower by 16·8 per cent. than the mean proportion in the decennial period 1871–80.

The excess in the zymotic mortality (Tables 28, 29) over that of the three preceding years was mainly due to an increase under the heading diarrhoea. The deaths from this disease, including simple cholera, were in the proportion of 1003 to a million living, whereas the average proportion in the three years 1881–2–3 had been only 615 per million. The increased mortality from bowel affections is explained by the comparatively high temperature of the summer of 1884, the mean temperature in the third quarter of that year, as recorded at Greenwich, having been 62°·7 F., whereas the average for the corresponding quarter of the three preceding years had been 59°·2 F.

The mortality from measles was also somewhat above the average, being 417 per million, whereas it had averaged only 370 per million in the preceding three years, and 385 in the still earlier quinquennium 1876–80. There was also an excess under the heading diphtheria, which is noteworthy inasmuch as it was a further step in the progressive rise of mortality ascribed to this disease which commenced in 1881. As has been stated in previous reports it may be questioned whether this progressive rise in the registered mortality from diphtheria be due to actual increase or merely to change in the use of terms by medical men. The mortality from small-pox was also slightly above the average of recent years, being 82 per million, and higher than in any of the six immediately preceding years, with the single exception of 1881, when it was 119 per million. By far the greater part of the deaths from small-pox occurred in London and the immediately adjacent counties of Kent, Middlesex, and Essex, and it was only in these registration counties, with the exceptions of Durham and Warwickshire, that the mortality from this disease was above the average for the whole country. (Table 34).

While the mortality from diarrhoea, from measles, from diphtheria, and from small-pox was, as has been shown, above the average of recent years, the mortality from scarlet fever and from whooping-cough was considerably below it.

The death-rate from whooping-cough was 423 per million, whereas it had averaged 461 in the three preceding years, and the lowest rate in any earlier quinquennium was 499; and the death-rate from scarlet fever, which had averaged 513 in the three years 1881–83, and 680 in the next preceding quinquennium, fell in 1884 to 400. It is worth noting that the mortality from scarlet fever, which has fallen persistently in each quinquennium (Table 29) since 1861–65, also fell uninterruptedly in each successive year (Table 28) from 1878 to 1884, and in this last year was less than in any previous year in the Table, which goes back as far as 1861.

The means are given in Table 34 of examining into the geographical distribution of the several zymotic diseases over the surface of the country. It will be seen that, of the 44 registration counties, there were 18 in which the death-rate from diphtheria in 1884 was above the rate for the whole of England and Wales; and on referring to the corresponding Tables in previous reports it will be seen that in no less than eleven of these eighteen the rate was also above the average in each of the three preceding years 1881, 1882, 1883; and, on looking back still further to the last decennial supplement, it will be found that in nine of these eleven the rate had also been above the average in the decennial period 1871–80.

There are manifestly some counties that are much more liable to diphtheria than others, and, if the counties with high rates be distinguished

by shading an outlined map of the Kingdom, it will be seen that there are two tolerably definite areas in which this disease apparently finds its most suitable home. The one has its base in the south-eastern counties, Sussex, Hampshire, Surrey, and Kent, and stretches upwards along the eastern side of England through Middlesex, Hertfordshire, Essex, Cambridgeshire, and Bedfordshire, occasionally reaching Norfolk, Nottinghamshire, and Lincolnshire; while the other area has its nucleus in North Wales and Shropshire, and tends to spread through Herefordshire and other bordering counties, as also in some years into South Wales, Monmouthshire, and even across the Bristol Channel into Somersetshire. The extent to which diphtheria spreads over these two areas differs very considerably in different years. In 1884 the area which was most extensively invaded was what may be called the south-eastern diphtheritic region, where a compact area, consisting of London and 11 registration counties, had rates above the general average; while in the western or Welsh diphtheritic region the disease was confined within comparatively limited boundaries, the only registration counties besides North Wales and Shropshire in which the rate exceeded the average for the whole country being Somersetshire and Dorsetshire. The high rate in this last-mentioned county was quite an exceptional incident, and the disease may have spread into it either from Somersetshire, where the rate had been high for three successive years, or from Hampshire, where there had been a high rate for four years in succession; Dorsetshire forming a link that connects the eastern and the western diphtheritic areas, and so being liable to infection from either.

Very different from the geographical distribution of diphtheria was that of scarlet fever. Diphtheria, as has been seen, both in 1884 and in a long period of preceding years, was comparatively absent from the northern counties. These, on the other hand, were the very counties in which the scarlet fever rate was highest in 1884. Indeed it was only in some of the comparatively northern counties, and in Wales with Monmouthshire, that the scarlet fever mortality exceeded the average in 1884, the registration counties thus distinguished being Northumberland, Durham, North and West Ridings, Lancashire, Cheshire, Staffordshire, and Leicestershire, as also North and South Wales, and Monmouthshire.

The geographical distribution of scarlet fever does not seem to be nearly so constant as that of diphtheria. There are only two registration counties, viz., Durham and West Riding, in which the mortality from this disease was above the average both in the decennial period 1871-80, and in each of the four years 1881, 1882, 1883, 1884, whereas the counties which presented similarly persistent high rates from diphtheria were, as already shown, nine in number.

Speaking generally, however, scarlet fever is most common in the mining and manufacturing counties—Durham, Yorkshire, Northumberland, Staffordshire, Warwickshire, Cheshire, Lancashire, Monmouthshire, and South Wales. This, however, is in some measure to be explained by the large proportion of young children in the populations of these industrial counties. No trustworthy inferences can be drawn from their scarlet fever death-rates without taking into account this peculiarity of their populations. The same is true of course also of diphtheria, which no less than scarlet fever is a disease that specially affects children; but, inasmuch as the counties in which diphtheria is, as we have seen, most prevalent are not counties in which children predominate in the population, any correction for age-distribution would tend only to increase the contrast between them and the rest of the country. As regards scarlet fever, however, it is essential, as before said, to take age-distribution into account; and inasmuch as the mortality from this disease is at its maximum in the 0-5 years period of life, we may take the scarlet fever death-rate at this period as our guide in determining its geographical distribution.

The registration counties in which the mortality from scarlet fever among children under five was above the general average in 1871-80 were as follows, beginning with the counties of highest mortality; Durham, Lancashire, Northumberland, West Riding, Staffordshire, Warwickshire, Cheshire, South Wales, Worcestershire, Derbyshire, and Cumberland. It thus appears that even after due correction is made for age distribution, scarlet fever is for some reason or other most destructive in the industrial, and especially the mining counties. What may be the explanation of this curious fact is a problem deserving attention from those engaged in sanitary administration. The explanation that naturally suggests itself is that probably the population in industrial and mining counties live in more than averagely close aggregation, and that the spread of infection is thus facilitated.

If, however, this were the true and complete explanation we should expect the geographical distribution of other infectious diseases to tally with that of scarlet fever. But we have already seen that this is not true as regards diphtheria; nor does it seem altogether true as regards measles; for the registration counties in which the mortality from this disease among children under five was above the general average in 1871-80 were, beginning from the highest, Lancashire, Devonshire, Monmouthshire, London, Cumberland, Leicestershire, and West Riding. The list agrees to some extent with the scarlet fever list given before, for Lancashire, West Riding, and Cumberland appear in both; and this agreement lends support to the explanation which refers the prevalence of the two diseases to the close aggregation of the population in industrial communities; but it is curious to note that, among other unexplained differences in the two lists, London occupies a high position in the measles list and does not appear at all in the scarlet fever list. Neither in the decennium 1871-80, nor in any year since that period, with the single exception of 1883, was the mortality from scarlet fever in London above the rate in the whole country; whereas the London mortality from measles was above the general mortality of the whole country both in 1871-80, and in each year since that period.

In addition, then, to the sanitary problem proposed above, there is also this further problem for sanitarians; how comes it that in London the mortality from scarlet fever is, as a rule, below that of the whole country, while the mortality in London* from measles is almost invariably above it? The full examination of this question scarcely comes within the range of statistical inquiry. In some measure, however, statistics may be brought to bear upon it, as revealing certain peculiarities in the incidence of the two diseases in question upon the London population. In the first place the comparative freedom from scarlet fever which London enjoys as compared with the rest of the country is only a privilege of recent years. The mean annual mortality from this disease in the fourteen years 1871-84 in London was 0.56 per 1000, that of all England and Wales being 0.65; but in the twelve preceding years 1859-70 the London rate was 1.11 per 1000, while in all England and Wales it was only 0.93. This change in the relative mortality seems to imply the introduction into London of something antagonistic to scarlet fever; and it may be suggested, as at any rate not impossible, that this something consists in the establishment in recent years of the Metropolitan Asylum hospitals for the reception and isolation of scarlet fever cases. In 1884 no less than a sixth of the registered deaths from this disease occurred in these hospitals, and it cannot be doubted that as regards the provision for the isolation of scarlet fever London is far ahead of the aggregate country.

* In the 14 years 1871-84 the scarlet fever mortality in London was above that of England and Wales four times, twice equal to it, and eight times below it; whereas in the same period the mortality in London from measles was above that of England and Wales twelve times, and below it only twice.

If this suggested explanation of the low rate of mortality in London from scarlet fever be the true one, there will be no further special necessity to consider the measles rate in that city; for the difficulty was not to explain why the measles rate was high, but why it was persistently high while the scarlet fever rate was persistently low. There is, however, a peculiarity in respect to measles in London which deserves notice, and which may possibly be connected with the comparatively high mortality from that disease.

An examination of the weekly returns in London for a long series of years shows, with unmistakeable clearness, that there are in the Metropolitan area two distinct seasons in the year in which the prevalence of measles, as measured by the deaths, rises far above the general level of the whole year. One period of maximum is in May and June, while the other is in November, December, and early January; and of the two periods the latter or winter period is the more considerable. Thus if the annual curve be drawn by the usual graphical method, the curve is at once seen to consist of two waves, of which the higher and more abrupt is in winter, and the lower and more gradual is in summer.

When curves are, however, drawn for other places than London, their form is found, as a rule, to be very different. The curve usually presents only a single annual wave, the maximum corresponding closely enough with the summer maximum of London. But the winter increase is absent, or almost so; so that there is only one maximum and one minimum point—not two of each, as in London. This is best seen by comparing, in the following Table, the London distribution of measles with that of Paris, or Berlin, or of the eight chief Scotch towns, or of Hull, Sheffield, and Newcastle-upon-Tyne.

TABLE E.—MONTHLY DISTRIBUTION OF DEATHS FROM MEASLES per 1200 in the Year.

MONTHS.	London, 1840-84.	Paris, 1865-69, 1872-83.	Berlin, 1875-83.	Scotch Towns, 1862-82.	Lanca- shire Towns, 1871-84.	Hull, Sheffield, Newcastle, 1871-84.	Bradford, Birmingham, Bristol, Brighton, Wolverhampton, 1871-84.
January -	111	79	51	89	116	94	92
February -	80	96	56	97	91	67	73
March -	88	87	65	114	107	100	105
April -	102	91	92	133	135	135	134
May -	110	123	185	145	120	130	136
June -	118	117	240	146	123	134	136
July -	105	165	202	132	101	121	94
August -	89	119	78	80	74	90	87
September -	66	96	44	53	49	62	47
October -	79	73	36	49	73	92	74
November -	112	66	69	73	90	92	90
December -	140	88	82	89	121	83	132
	1200	1200	1200	1200	1200	1200	1200

NOTE.—The Paris figures were taken from the *Annuaire Statistique* for 1883; the Berlin and the Scotch figures were got by summation of the annual returns in the *Statistisches Jahrbuch* and the Scotch Registrar-General's Reports. The figures for the English towns were obtained from the Weekly Returns; the first and the second four weeks being taken to represent January and February respectively, and the next five to represent March; and so with the three other quarters. In all cases due correction has been made for difference in length of months.

All of these towns, or groups of towns, agree in showing an excess of measles from April to July, and in having the maximum somewhere in the autumn months—usually September or October. But, while in London there is also a second period of excess from November to January, such winter excess is barely, if at all, appreciable in the other cases.

It may possibly, therefore, be found that the persistently high mortality in London from measles is connected with this double seasonal prevalence of that disease. In order to test to some extent this hypothesis, a number of English towns have been selected in which the measles mortality is usually low, and of other towns in which it is usually high, and the monthly distribution calculated for each group. The Lancashire towns—Liverpool, Manchester, Salford, and Oldham—usually have a high measles-rate, and this group of towns agrees with London in having a very manifest winter period of prevalence. On the other hand, Hull, Sheffield, and Newcastle-upon-Tyne usually have a low rate of measles mortality, and in this group the winter maximum period is not discernible. Another group of towns with low measles mortality comprises Bradford, Birmingham, Wolverhampton, Bristol, and Brighton. Here, however, notwithstanding the low mortality, there is a winter period of excess as in London, but one of much smaller extent, being almost limited to December.

On the whole it would appear to be probable, though the statement must be made with much reserve, that, when the measles mortality in a town is habitually high, there are in it two measles seasons—a summer and a winter season; and that, when the measles mortality is habitually low, the winter prevalence is either absent or comparatively slight.

The deaths ascribed to fever, including typhus, enteric fever, and simple and ill-defined forms of continued fever, were in the proportion of 276 per million persons living in 1884, and this proportion was smaller than in any previous year. (Table 39). Going back only as far as 1875, that is to the first year of the decennium of which 1884 was the last, the fever rate was 543 per million, or almost exactly double the rate in 1884. This remarkable decline of mortality was shared by persons of all ages, but, as is shown in the following Table, was much more considerable at the extremes of life than in the middle age periods; in no age period, however, was the decline less than 32 per cent.

TABLE F.—DEATH-RATE PER MILLION FROM "FEVER," at different Periods.

AGE-PERIODS.	Deaths per Million living.		Decline per cent. since 1875.
	1875.	1884.	
0—	741	224	70
5—	573	258	55
10—	458	270	41
15—	573	377	34
25—	459	313	32
35—	459	254	45
45—	448	209	53
55—	543	222	59
65—	638	211	67
75—	564	171	70
All Ages - -	543	276	49

The explanation of this inequality in the decline of the fever rate is not improbably to be found in greater accuracy of diagnosis and greater carefulness in statement of cause on the part of medical men, who are no longer so contented as in former times to describe the somewhat vague affections to which very young and very old persons often succumb as "fever," simply using this term as a convenient one for an undiagnosed disease. If this be so, as appears probable, not all the reduction of mortality from fever can be claimed as the result of sanitary measures; some part of it being only apparent.

Parasitic Diseases.—The deaths ascribed to these diseases, which are mainly deaths of infants from thrush, were 1049, and, though considerably below the numbers returned in years prior to 1881, when the presence of aphthous spots in the mouth was thought to be a sufficient explanation of a child's death, did not differ materially from the numbers in the last four years.

Dietetic Diseases.—The deaths in this group may be divided into deaths from excess and deaths from deficiency of diet. The latter have for years been diminishing in number, scurvy being now almost a thing of the past in this country, and starvation having become more and more uncommon with the diminishing price of food, so that the deaths ascribed to it are now almost entirely limited to infants whose mothers cannot supply an adequate amount of breast-milk. The deaths ascribed to these several forms of deficiency of food were in smaller proportion in 1884 than in any previous year, being only 11 per million living. On the other hand the deaths ascribed to intemperance have been gradually increasing, though, as stated in previous reports, this increase has been probably more apparent than real. Moreover, for some few years past this apparent increase has ceased and the mortality has remained practically constant. Thus, in the first four years (1881–84) of the current decennium, the deaths from intemperance were successively in the proportions of 47, 50, 48, and 47 to a million living.

Constitutional Diseases.—The deaths in this group were 92,622, and in the proportion of 3413 to a million living, a proportion practically identical with that recorded in the three previous years. Whilst, however, the mortality from various forms of rheumatism remained nearly constant, the mortality from cancer and from diabetes, respectively, made another slight advance, in each case attaining a figure higher than any previously recorded, while on the other hand the mortality from phthisis underwent a further slight decline and fell to 1818 per million, which is the lowest rate recorded in the Table. (Table 28.)

As regards the continuous increase under the heading Cancer, an opinion has been expressed in several previous annual reports that some at any rate of this increase was only apparent and due to improved diagnosis. It appears, however, to be the belief of many medical men that malignant disease is really on the increase; and it may be well, therefore, in view of the grave importance of the question, to give such further statistics concerning this disease, or rather these diseases, as our records permit.

The following Table gives the mean annual mortality from cancer registered in successive periods, per million males and females respectively living at successive stages of life.

TABLE G.—MEAN ANNUAL MORTALITY of MALES and FEMALES from CANCER, PER MILLION LIVING at SUCCESSIVE AGE-PERIODS.

All Ages	193	244	315	379	434	523	622	692

The facts which stand out conspicuously in this Table are (1) the gradual increase of cancer mortality in the successive decennia, an increase common to both sexes, but considerably greater in the case of males than of females; (2) the very much higher mortality of females than of males at all age-periods after the 25th year; and (3) the rapid rise of mortality both of males and females in the successive age-periods after the 25th year.

Let us separately consider these three features in the Table.

(1.) The male mortality in the successive decennia shows a much greater increase than the female mortality, both in the aggregate, and at each separate age-period after the 35th year, that is to say, at each age-period in which cancer mortality is of much numerical importance. Thus comparing the rates in the decennium 1851-60 with the rates in the last complete decennium 1871-80, we have the following increases per centum:—

TABLE II.—CANCER RATES in 1871-80 compared with those of 1851-60.

Age-periods.	Increase per cent.	
	Males.	Females.
35—	39	35
45—	68	39
55—	72	49
65—	74	50
75—	74	52

This very unequal increase in the male and female cancer mortality seems difficult of explanation on the hypothesis that the general increase has been altogether real and not in great part only apparent; for on this hypothesis, as was pointed out in the last Annual Report, there seems no valid reason why males should have suffered so much more than females, whereas the difference in the increase is readily intelligible on the hypothesis that the rise was, at any rate in great measure, due to improved diagnosis. For the cancerous affections of males are in a much larger proportion internal or inaccessible than are those of females, and consequently are more difficult of recognition, so that any improvement in medical diagnosis would add more to the male than to the female figures.*

(2.) Up to the end of the period 20-25 years the cancer mortality is practically equal in the two sexes. But immediately after that period the female mortality increases very much more rapidly than does the male. Taking the male rate (1871-80) as 100 at each age-period, the female rate is 246 in the 25-35 age-period, 331 in the 35-45 period, 250 in the 45-55 period, and 173, 135, 117 in the three remaining periods.

It thus appears that while the female liability to cancer greatly exceeds the male liability at all age-periods after the 25th year, this differential influence of sex is far most strongly marked in the thirty years that intervene between the end of the 25th and 55th years of life, and is at its maximum in the middle of that period, a stage of life characterised by the gradual cessation of physiological activity in those female organs that are most liable to cancerous degeneration.

(3.) The annual liability to death from cancer increases rapidly with age; with males the increase goes on to the end of life, but with females only to about the 75th year, remaining after that time stationary, the figure for females 75 years of age and upwards being almost the same in each decennium as that for females aged from 65 to 75 years.

In simply saying, however, that the liability to death from cancer increases with age, no more is said than may be stated with equal truth of liability to death generally. The question is, does the annual liability to death from cancer increase more rapidly than the annual liability to death of all kinds. This question will, of course, be answered by calculating the proportion in which the cancer deaths stand to total deaths at each successive age-period; and the results of such calculation are given in the following Table:—

TABLE I.—RATIO OF TOTAL DEATHS TO DEATHS FROM CANCER, 1871-80.

Age-periods.	Total deaths to one from Cancer.		
	Persons.	Males.	Females.
20—	255	262	248
25—	71	131	49
35—	24	57	15
45—	14	28	9
55—	14	22	10
65—	21	27	17
75— and upwards }	48	56	44

* Cf. 46th Annual Report, p. xviii.

In this Table the age-periods before 20 years are omitted as unimportant, and as regards the rest of life it will be seen that the liability to death from cancer increases much more rapidly than the liability to death generally up to the 45-55 years period; but that in the later age-periods the general mortality increases more rapidly than the cancer mortality, the proportion of deaths from this disease to total deaths becoming smaller and smaller. The characteristic feature therefore of cancer mortality is not its increase with advance of years, for this it shares with other fatal affections, but its disproportionate increase in the middle periods of life.

Seeing how enormous are the differences in the mortality from cancer at different ages and in the two sexes, it is plain that any inquiry into the geographical distribution of this kind of disease which does not take account of the wide differences in the sex and age distribution of the populations of different geographical areas would be very likely to lead to erroneous conclusions. For instance, the county with the lowest cancer mortality in 1871-80 was Durham, and not far off from Durham in the list came sundry other mining counties. But these mining counties contain in their populations a much larger proportion of males, and, what is still more important, a much larger proportion of young persons than the average; and it may very possibly be that the low cancer-rate is simply, or in large measure, due to these peculiarities of age and sex distribution, and not to any geographical conditions.

The county cancer-rates, then, require much correction before they can be used for comparison with each other; and this correction can only be satisfactorily effected by calculating the cancer-rate at each successive age-period for males and females separately in each individual county, and then applying the rates thus obtained to a population of fixed age and sex distribution, and thus ascertaining how many deaths would occur annually in each county were the population in all identical in composition. This somewhat laborious process has been adopted for the construction of Table J., the standard population used being the mean population of England and Wales in 1871-80, and the cancer rates being derived from the returns of those same ten years.

The first thing that strikes the eye in the Table is the excessively high cancer mortality in London. This is, however, probably to be explained, at any rate in part, by London being a place to which numerous persons betake themselves when surgical operations are required; and not improbably a somewhat similar explanation may account for the high mortality in Devonshire, as being a health resort of sick persons. At the same time, however, it is to be noted that the counties round about London, such as Surrey, Sussex, Middlesex (extra-metropolitan), and Berkshire, also have high rates; which seems to indicate some general condition in this part of England favourable to the development of cancer.

The position in the Table of Cambridgeshire, and of the adjoining counties of Northampton and Huntingdon, as also of Bedfordshire, tells in favour of the widely accepted opinion that cancer is specially prevalent in the fen country and in low lying ground. At the same time it must be noted that neither Lincolnshire nor Essex has a remarkably high rate.

The mining and industrial counties, as a rule, are low down in the list, and contrast very favourably with the generality of the agricultural counties. Warwickshire, however, in spite of its largely industrial population is high up, while Hertfordshire and Buckinghamshire, though agricultural, are almost at the bottom.

The counties with the highest rates are almost all in the eastern half of the kingdom, while the counties in the western half have, as a general rule, lower rates. But there are several notable exceptions to this statement, as Warwickshire, Devonshire, and Hertfordshire.

TABLE J.—MEAN ANNUAL DEATHS FROM CANCER IN REGISTRATION COUNTIES, per Million living aged 25 Years and upwards, with the same Age and Sex Distribution, 1871–80.

Buckinghamshire - - - -	881	605	1,131
South Wales - - - -	873	706	1,024
Derbyshire - - - -	839	536	1,114

As a general rule the male and female rates tally so far as that when the one is high so also is the other, and vice versa; but there are exceptions, as Bedfordshire, in which county the male rate is one of the highest, while the female rate is below the average.

Possibly many of the irregularities and apparent incomprehensibilities of the Table might disappear if a longer period than ten years, or larger areas than counties, were taken as a basis. Instead, therefore, of taking counties let us take the eleven divisions of the country, and instead of taking only the ten years 1871-80, let us also include the two previous decennia, so as to have a basis of 30 years.

The results are given in the following Table, in which the eleven divisions of England and Wales are arranged in the order of the annual cancer mortality, beginning with the highest.

TABLE K.—CANCER MORTALITY in REGISTRATION DIVISIONS, 1851-80.

Divisions.	Mean Annual Mortality per Standard Million.		
	Persons.	Males.	Females.
Cols. - - -	1	2	3
London - - -	1,117	736	1,463
South-Eastern - - -	898	557	1,207
South-Midland - - -	886	527	1,148
Eastern - - -	855	502	1,175
West-Midland - - -	841	519	1,138
Yorkshire - - -	827	511	1,114
Northern - - -	815	565	1,041
South-Western - - -	811	555	1,043
North-Western - - -	802	523	1,055
North-Midland - - -	799	496	1,074
Welsh - - -	697	538	841
ENGLAND AND WALES - - -	867	561	1,144

At the head of the Table stands the London division with a mortality far above that of any other division; and at the bottom of the table stands the Welsh division with a mortality far below any other. But it must not be assumed that the figures for these two divisions really represent different degrees of liability to the development of malignant disease. For they represent nothing more than the registered mortality in the divisions; and it is extremely probable that the London mortality is raised to a very considerable though uncertain degree by patients coming up from all parts of the country to become inmates of cancer hospitals or to put themselves

into the hands of London surgeons; and, on the other hand, it is very possible that the figure for the Welsh division may understate the liability to cancer in that area, owing to the very large proportion of deaths in Wales which are registered without specification of cause. If these two extreme divisions, then, be put aside as open to question, the range of differences between the remaining nine divisions is not very great. For the second division in the Table is the South-Eastern with an annual cancer mortality of 898 per million living, while the North-Midland division, which is next above the Welsh division, has a mortality of 799, which is only 11 per cent. below the South-Eastern mortality. Or, to put it in another way, the mortality in the South-Eastern division is 4 per cent. above, and in the North-Midland is 8 per cent. below, the mortality for the whole of England and Wales. Such differences are hardly sufficient to justify any positive conclusions as to the geographical liability to cancerous disease. There is, moreover, a second suspicious feature in the Table. If the differences of mortality between the several divisions really represented differences of liability to cancer owing to differences of geographical conditions, we should naturally expect to find a very close correspondence in the respective orders of the male and the female mortalities; for geographical conditions may be assumed to affect both sexes alike. But it will be at once seen, on comparing columns 2 and 3, that there is scarcely so close a correspondence as the hypothesis demands. For instance, the male mortality is lower in the North-Midland division than in any other, even than in the Welsh division, but this is by no means the case with the female mortality. So again the female mortality is far lower in the Welsh division than elsewhere, while the male mortality is higher than in five other divisions. It must be confessed, then, that, notwithstanding all the labour that has been expended in duly correcting the cancer mortality in the several counties and divisions for differences of the age and sex distribution of their respective populations, no certain conclusions can be drawn from the results. The labour, however, will not have been altogether wasted if it prevents incautious inquirers from forming hasty conclusions from rates that have neither been corrected nor based on a sufficient number of years.

Taking, however, the rates in Table K as they stand, and remembering that they are based on the places of death, not on the places where the disease originates, it appears that the highest mortality is in London and the three divisions* that are in immediate contact with London, namely, the South-Eastern, the South-Midland, and the Eastern; and that the divisions with the lowest mortality are, with one exception, on the opposite or western side of the country, namely, the Welsh, the North-Western, and the South-Western divisions. The exception is the North-Midland division, an exception which at once prevents us from drawing the tempting general conclusion, that cancer mortality is lowest on the western side and highest on the eastern side of England.

Local Diseases.—Among the groups of diseases included in this large class, by far the most important numerically is that of diseases of the respiratory organs, and the mortality from these affections was lower than in any year since 1872, a fact which cannot be explained by any transference between phthisis and respiratory diseases, inasmuch as the mortality from phthisis was, as already noted, the lowest on record.

The mortality from diseases of the liver was the lowest recorded, a testimony to the growth of temperate habits in the population. The mortality, however, from other affections of the organs of digestion was somewhat above the average, and indeed higher than in any year since 1865.

* For the counties comprised in each division, see Table 9, p. xi.

The death-rate from urinary diseases was slightly lower than in the immediately preceding year, although inquiries instituted in 1884 for the first time into the exact causes of death in cases certified simply as due to "dropsy" added not inconsiderably to the deaths classified as of urinary origin.

The mortality from diseases of the circulatory system, which for a long series of years had been increasing, was, with a single exception of 1879, higher in 1884 than in any previous year. Part of the increase was due to the same cause as has been mentioned as having contributed to raise the mortality from urinary diseases, namely, the institution of inquiries into cases returned as due to "dropsy." But even when due account is taken of this disturbing element in the comparison with former years the mortality from this group of diseases was excessively high.

The deaths ascribed to childbirth, including puerperal fever, were in the proportion of 4·8 to 1000 live births; in each of the two immediately preceding years it had been 5·1, and in 1881 had been 4·8. The mortality from this cause has thus recently remained practically stationary. It must, however, be admitted that the returns of mortality from puerperal affections are very untrustworthy, many medical practitioners contenting themselves with assigning peritonitis or septicæmia as the cause of death of a puerperal woman without mention of the puerperal condition. Thus out of 453 cases of married women whose deaths were returned in 1884 simply as due to peritonitis or to septicæmia, it was found on inquiry that no less than 156 were cases of puerperal character.

Violent Deaths.—The deaths ascribed to some or other form of violence were 17,695, and in the proportion of 652 to a million living. This is the lowest rate recorded in the Tables. (Tables 28, 39). The decline was in the deaths from accident; the deaths from homicide remaining at the low level to which they had fallen in recent years of 12 per million; and the deaths from suicide being in the proportion of 75 per million, a rate only twice exceeded in the Table, namely in 1879 and 1880. Suicide has been distinctly increasing in recent years. The mean annual mortality from it in 1871–75 was 66·2 per million; in 1876–80 it was 73·8, and in the four years 1881–84 further rose to 74·3.

Ill-defined and not specified Causes.—In 31,265 cases the cause of death was not described in such a way as allowed the death to be properly classified. The system adopted some few years back of applying by letter, so far as exigencies of office work permitted, for further particulars as to these ill-defined causes was continued in 1884, and extended to deaths returned simply as due to "dropsy." In all 2000 letters of inquiry were sent to medical men who had given these imperfect certificates, and in most instances the necessary information was obtained. But 2000 is but a small proportion out of 32,000, and it must be confessed that the hopes entertained when this laborious system was introduced, that medical men having their attention directed to the matter would be henceforth more careful in giving the necessary precision to their certificates, have scarcely been realised; for the deaths in this unsatisfactory group were more numerous in 1884 and in 1883 than in either of the two immediately preceding years.

Certification of the Causes of Death.—During the year 1884 the causes of 483,279 or 91·1 per cent., of the 530,828 deaths were certified by registered medical practitioners; while the causes of 28,201 or 5·3 per cent. were certified by coroners. The causes of the remaining 19,348, or 3·6 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. In the metropolis the proportion did not exceed 1·3 per cent. Excluding the extra-metropolitan parts of Middlesex and Surrey,

the percentage did not exceed 0·7 in Wiltshire, 1·4 in Berkshire, 1·7 in Sussex and Buckinghamshire, 1·8 in Hampshire and in Rutlandshire, and 2·1 in Monmouthshire; while it ranged upwards to 5·9 in Cumberland, 6·0 in Herefordshire and in Shropshire, and 6·6 in Cornwall. In Wales the proportion was 9·6 per cent.

Compared with the mean proportion in the five years 1879-83, there was a decline in the proportion of uncertified deaths in England and Wales in 1884 of 14·3 per cent.

PROGRESS OF REGISTRATION.

During the year 1884 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,846,180. At the close of the year the aggregate number of names in these indexes, which on 31st December 1884 embraced a period of 47½ years, was 70,291,942. The total number of searches in 1884 (including those in non-parochial and other records) was 34,843, showing an increase of only 34 upon the number in the previous year; the number of certificates issued was 27,158, or 4·9 per cent., fewer than in 1883. The amount received as fees for searches and certificates in the year 1884, and paid into Her Majesty's Exchequer, was 5,177*l.* 15*s.* 0*d.* (See Table 49.)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi.-xxii. and xxv.-xxvi.

MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 183,004, and that the number of deaths was 1611; so that the rate of mortality was 8·8 per 1000, having been 9·8 in the immediately preceding year.

The average strength of the Army at home was 89,994, and the deaths were 523; while the average strength of the Army abroad was 93,010, and the deaths 1088. The death-rate at home was therefore 5·8, and the death-rate abroad 11·7 per 1000. The home rate was the lowest, and the foreign rate almost the lowest, on record. (Tables 53-57.)

MORTALITY IN THE NAVY.*

The total force in the Service afloat, corrected for time, in 1884 was 43,000. The deaths were 387, being in the ratio of 9·0 per 1000. Of the 387 deaths, 251 were due to disease and 136 to violence; so that the death-rate from disease was 5·83, and from violence 3·16 per 1000.

Of the 136 violent deaths, 76 were from accidental drowning, 21 from wounds in action, 7 from suicide, and 32 from other accidental causes.

The assigned causes of the 251 deaths from disease were as follow:—

Continued fevers	-	-	51	Diseases of—	
Paroxysmal fevers	-	-	35	Circulatory system	- 21
Rheumatism	-	-	6	Digestive system	- 24
Tubercular diseases	-	-	31	Respiratory system	- 34
Diseases of nervous system	-	-	31	Urinary and generative systems	- 8
				All other causes	- 10

* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

Marine Register Book.—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrar-General of England, of Scotland, or of Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1884 the entries recorded in this Register were 422 births and 4510 deaths. Of these 4510 deaths, 2070 were returned as those of persons of English origin, while 794 were indefinitely returned as those of persons of "British" origin, out of which number it is impossible to estimate correctly the proportion belonging to England.

Among *passengers* on board merchant vessels at sea (see Table 59), 264 births and 799 deaths were reported during 1884; the deaths showed a decrease of 15 per cent. from the number returned in the preceding year.

Mercantile Marine.—The Registrar-General of Shipping and Seamen reports (see Table 60), that the number of merchant seamen at sea in registered vessels during 1883 was 200,727. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during the year 1883 were 4451, equal to an annual rate of 22.2 per 1000 of the strength, exceeding by 0.8 the average annual rate (21.4) during the 32 years 1852-83. The facts for 1884 are not yet completely available.

INTERNATIONAL VITAL STATISTICS.

In Tables 70-86 will be found international vital statistics relating to thirteen of the principal European States, including the United Kingdom, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 70 affords the means for comparing the marriage, birth, and death rates in each State, in a series of years, with the mean rate during the period 1861-80. Tables 71-86 give detailed statistics for England and Wales, Scotland, Ireland, and for thirteen foreign States.

The *marriage-rates* in the various countries showed in 1884 a general, though slight, recovery from the declining rates in recent years. The rates in Austria, Switzerland, and Belgium, however, corresponded with those in 1883, while that in Hungary declined. The rates in 1884, of persons married, per 1000 of the estimated population, ranged from 13.1 in Sweden, and 13.5 in Scotland and in Belgium, to 15.6 in Denmark, 15.7 in the German Empire and in Austria, 15.9 in Prussia, and 16.4 in Italy.

The *birth-rates* in most of the countries also showed a general recovery from the declining rates in recent years; the largest increase occurring in Denmark and Italy. In all the States, however, except Denmark, Norway, Hungary, and Italy, the rate in 1884 was below the mean rate in the twenty years 1861-80. The birth-rates in 1884 ranged from 24.8 per 1000 in France (at which figure it was stationary during the

three years 1882-3-4), 28·1 in Switzerland, and 30·0 in Sweden, to 36·9 in Prussia, 37·4 in the German Empire, 38·4 in Austria, 38·7 in Italy, and 46·0 in Hungary.

The *death-rates* in 1884 in the various countries did not materially differ from those recorded in the previous year; they showed the largest decline 0·9, 1·2, and 1·6 per 1000 respectively in Austria, Hungary, and Ireland, while the largest increase was 0·4 in the Netherlands. With the single exception, however, of Ireland, each of the rates in 1884 was considerably below the mean rate in the twenty years 1861-80. The lowest death-rates in 1884 were 16·4 in Norway, 17·5 in Sweden, and 17·6 in Ireland; the rates in the other States ranged upwards to 26·1 in the German Empire, 26·7 in Italy, and 29·2 in Austria. The mean death-rate in the twelve European States furnishing returns for 1884 was 25·4, and exceeded the rate in England and Wales by no less than 5·8 per 1000.

I have the honour to be,

Sir,

Your faithful Servant,

BRYDGES P. HENNIKER,

Registrar-General.

REMARKS ON THE METEOROLOGY OF THE YEAR 1894.

By JAMES GLAISHER, Esq., F.R.S., &c.

The most remarkable occurrences during the year were the south-westerly gales between the 22nd and 26th, and heavy storms on the 26th and 27th of January; the north wind unusually prevalent in June; a marked deficiency of S.W. winds, and an excess of N.W. in October; and a great deficiency of S.W. winds in November.

The following remarks with regard to excess or deficiency of atmospheric pressure, temperature, and rainfall are primarily derived from the observations made about London, but they may be taken as applying generally to the whole country.

Atmospheric pressure.—The readings of the barometer were high till January 22nd, particularly from the 12th to the 21st, the mean excess of daily pressure for the 12 days was 0.62 in., and for the 22 days ending 22nd was 0.38 in. during the remainder of the month it was low, particularly on the 26th and 27th days, the defects below the average on the 26th being 0.94 in., and on the 27th 0.77 in. for the 10 days ending February 1st it was 0.37 in. Till February 16th the pressure was alternately in excess, and defect for a few days together. From February 17th to March 12th, with the exception of a few days, when it was about its average value, it was low, the average daily deficiency for these 25 days being 0.22 in. From March 13th to the 29th the pressure differed but little from its average, from March 30th to April 8th the mean deficiency was 0.31 in., from the 9th to the 14th the mean excess was 0.11 in. daily, for 5 days there was a deficiency of 0.02 in. daily. From April 15th to the 23rd the departures from the averages were very small. From April 24th to May 6th the barometer was low, the average daily deficiency was 0.23 in. From May 7th to the 16th there was an average daily excess of 0.15 in., for 3 days a deficiency little differing from the average. From May 20th to the end of the month the pressure was in excess, averaging 0.26 in. daily, from June 1st to the 9th the daily deficiency averaged 0.23 in., from June 10th to July 3rd, the pressure was above its average, excepting June 24th, which was slightly below, the mean daily excess of this period being 0.18 in.; from July 4th to the 17th it was below, the average daily deficiency being 0.12 in.; from the 18th to the 20th the pressure was 0.13 in. in excess of the daily average; from the 21st to 24th it was slightly deficient. From July 25th to August 17th the excess daily was 0.13 in.; the 18th and 19th days were below; from the 20th to the 26th the excess over the average was 0.11 in. daily. From August 27th to September 7th the mean deficiency equalled 0.34 in. (September 4th being as much as six-tenths below its average); from September 8th to October 7th the daily excess of atmospheric pressure was 0.20 in.; from October 8th to the 12th it was below by 0.22 in. daily; for 13 days there was an excess of mean daily pressure to the amount of 0.31 in., then for 3 days a daily deficiency of 0.20 in. From October 29th the pressures were above their averages with but few slight exceptions till November 27th, the average daily excess of these 30 days being 0.26 in. From November 28th to December 20th the pressure was generally below its average, the mean daily deficiency being 0.17 in.; from the 21st the pressure was alternately on 2 or 3 days a little above the average, and then 2 or 3 days a little below.

Temperature.—With the exceptions of 3 or 4 days the temperature was above its average till February 26th, the mean excess of these 57 days was 5°.1; from February 27th to March 3rd the weather was cold, the average daily deficiency of temperature being 3°.8. From March 4th to the 24th the weather was fine with much sunshine. On the 15th the

excess of temperature over its average was as large as 15° , and it was $14^{\circ}\cdot 0$ on the 16th, the mean daily excess of the 5 days, March 14th to the 18th, was $13^{\circ}\cdot 0$, and of the 21 days ending March 24th was $5^{\circ}\cdot 4$; from March 25th to the 29th the weather was cold with easterly winds, the average daily deficiency of temperature being $2^{\circ}\cdot 6$; from the 30th to April 9th the temperature was above its average (the 2nd being as much $12^{\circ}\cdot 3$, and the 3rd $11^{\circ}\cdot 1$ above their averages), the mean daily excess being $5^{\circ}\cdot 4$; it was below from April 10th to May 8th, the average daily deficiency of the 29 days being $4^{\circ}\cdot 3$; from May 9th to the 17th it was warmer (the 11th and 12th being $13^{\circ}\cdot 2$ and $11^{\circ}\cdot 9$ respectively above the averages), the mean daily excess being $6^{\circ}\cdot 9$; for 3 days the deficiency daily was $0^{\circ}\cdot 5$, then for 7 days the excess was $3^{\circ}\cdot 0$; from May 28th to June 11th the weather was very cold, the average daily deficiency of mean temperature was $5^{\circ}\cdot 0$; from the 12th to the 14th it was warmer, being $4^{\circ}\cdot 0$ above the average; from the 15th to the 21st it was $3^{\circ}\cdot 0$ below the average; from June 22nd to July 10th the days were warm, the mean being $3^{\circ}\cdot 7$ above the average; from July 11th a cold period set in, and continued till the 29th, the mean daily deficiency being $1^{\circ}\cdot 4$; for 4 days the mean excess was $4^{\circ}\cdot 5$ daily, then for 3 days the temperature was slightly below its average; from August 6th to the 24th the mean daily excess was $5^{\circ}\cdot 9$, the 8th day being as much as $10^{\circ}\cdot 4$, and the 11th $13^{\circ}\cdot 5$ above their average values; from August 25th to September 8th the temperature was cold, the mean deficiency of these 15 days being $2^{\circ}\cdot 2$; from September 9th to October 1st the mean average excess was $4^{\circ}\cdot 4$ daily, the mean deficiency of the next 4 days was $2^{\circ}\cdot 2$ daily, the 6th and 7th days were slightly in excess of their averages; there was then a week of very cold weather, the deficiency averaging $5^{\circ}\cdot 3$ daily; from the 15th to the 19th the daily excess was $4^{\circ}\cdot 2$; from the 20th the mean temperature was below with but few exceptions till the 29th, the deficiency being $1^{\circ}\cdot 0$ daily; for 15 days ending November 13th the excess of mean temperature was $3^{\circ}\cdot 9$; from November 14th to December 2nd the weather was cold, the deficiency being $4^{\circ}\cdot 3$; from December 3rd to the 20th the mean temperature was high, the excess over the average being $3^{\circ}\cdot 6$ daily; and for the last 11 days in the year the daily deficiency was $1^{\circ}\cdot 9$.

Rainfall.—The fall of rain in January was $1^{\circ}\cdot 77$ in., in February $1^{\circ}\cdot 50$ in., in March $1^{\circ}\cdot 37$ in., in April $1^{\circ}\cdot 11$ in., in May $0^{\circ}\cdot 96$, being $0^{\circ}\cdot 11$ in., $0^{\circ}\cdot 09$ in., $0^{\circ}\cdot 17$ in., $0^{\circ}\cdot 64$ in., and $1^{\circ}\cdot 10$ in. respectively below their averages; in June the fall was $2^{\circ}\cdot 24$ in., being $0^{\circ}\cdot 24$ in. in excess of its average; in July it was $1^{\circ}\cdot 77$ in.; in August $0^{\circ}\cdot 67$ in.; back to 1815 there are only four instances when the fall in August was as small as $0^{\circ}\cdot 67$ in.; in September $2^{\circ}\cdot 09$ in., in October $1^{\circ}\cdot 04$ in., in November $0^{\circ}\cdot 69$ in., being $0^{\circ}\cdot 78$ in., $1^{\circ}\cdot 74$ in., $0^{\circ}\cdot 35$ in., $1^{\circ}\cdot 79$ in., and $1^{\circ}\cdot 36$ in. respectively below their averages; and in December it was $2^{\circ}\cdot 54$ ins., being $0^{\circ}\cdot 56$ in. in excess of the average.

The total fall of rain during the year was $18^{\circ}\cdot 05$ ins., being $7^{\circ}\cdot 32$ ins. below the average.

The deficiency of rainfall was general over England and Wales, and particularly in Lancashire and Yorkshire, which counties were threatened with a water famine. The four dry months were August to November.

The total falls of rain in the year ranged from $4^{\circ}\cdot 16$ ins. at Bath, $42^{\circ}\cdot 07$ ins. at Stonyhurst, and $41^{\circ}\cdot 47$ ins. at Bolton, to $1^{\circ}\cdot 29$ ins. at Cambridge, $16^{\circ}\cdot 69$ ins. at Royston, and $17^{\circ}\cdot 17$ ins. at Carlington. The greatest number of rainy days in the year were 213 at Guernsey, 208 at Nottingham, 205 at Barnstaple, and the least were 121 at Royston, 127 at Barnet, and 135 at Blackheath.

Thunderstorms occurred on 55 days during the year; 11 were in July, 9 in August, 6 both in June and September, 5 in May, 4 in February and April, 3 in October, 2 in January, March, and December, and 1 in

November. The storms of April, May, June, July, August, and September were mostly in the Midland districts.

Thunder was heard but lightning was not seen on 51 days during the year. The greatest number of days in one month was 17 in July, and the last was 1 on October. Thunder was not heard at any place in March or November.

Lightning was seen but thunder was not heard on 59 days during the year.

Solar halos were seen on 100 days in the year. On 17 in November, 14 in October, 13 in March and September, 8 in May and December, 5 in February, April, and August, 4 in June, and 3 January and July.

Lunar halos were seen on 53 nights in the year. On 10 in March, 7 each in August, November, and December, 4 each in January, February, April, October, 3 in September, and 2 in May, and none in July.

Aurora Boreales were seen on the 17th and 19th of January at Carlisle, and on the 24th of April at Oxford, Cardington, Halifax, and Stonyhurst.

Snow fell on 9 days in January, 8 days in February, 7 days in March, 6 days in April, 3 days in May and October, 9 days in November, and 12 days in December. The latest day in spring on which snow fell was May 18th at Carlisle, and the first day it fell in the following autumn was October 9th, at Bolton and Carlisle.

Hail fell on 98 days during the year, 16 of which were in April. The least number of days in any month was 4 in June and November. No hail fell in September.

Fog prevailed on no less than 138 days during the year, and they were distributed as follows:—January 18, February 9, March 13, April 11, May 11, June 9, July 8, August 10, September 8, October 12, November 18, and in the December 11. Throughout the year fog was much less frequent in the northern counties than in the southern districts.

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

* These estimates are calculated from the numbers enumerated at the last five Censuses. For the estimated numbers of males and females in each year, and for population estimates for years prior to 1880, see Table 60.

* Wandsworth was not included in Registration London until 1814; Lewisham and Hampstead were not included until 1847; since that year the boundaries of Registration London have remained unchanged.

For the years 1838-50 the numbers of deaths from the various diseases are derived from summaries of 52 or 53 weeks; for years subsequent to 1850 they are derived from the Annual Reports, and relate to the calendar year.

TABLE 33.—LONDON.—Death-rates from the Principal Zymotic Diseases, and Infant Mortality, 1838-84.

* The Populations of the counties have been estimated to the middle of 1883 from the numbers enumerated at the Censuses in 1871 and 1881.

TABLE 36.—ENGLAND.—Deaths from various Causes to a Million Deaths from All Causes, 1884.

CAUSE OF DEATH.	Proportional Number.	CAUSE OF DEATH.	Proportional Number.	CAUSE OF DEATH.	Proportional Number.
ALL CAUSES - - -	1,000/000	Inflammation of Brain or its Membranes - - -	16248	Acute Nephritis - - -	2217
Small-pox - - -	4500	Apoplexy - - -	27702	Bright's Disease - - -	11863
Chicken pox - - -	243	Softening of Brain - - -	6140	Uremia - - -	891
Measles - - -	21333	Hemiplegia, Brain Paralysis - - -	17812	Suppression of Urine - - -	202
Epidemic Rose Rash - - -	104	Paralysis Agitans - - -	318	Calculus - - -	420
Scarlet Fever - - -	2044	Insanity, General Paralysis of Insane - - -	5307	Hematuria - - -	303
Typhus - - -	618	Chorea - - -	213	Diseases of Bladder and of Prostate - - -	3808
Relapsing Fever - - -	21	Epilepsy - - -	5908	Other Diseases of Urinary System - - -	2536
Influenza - - -	134	Convulsions - - -	42344		
Whooping-cough - - -	21619	Laryngismus Stridulus - - -	1449		
Mumps - - -	107	Idiopathic Tetanus - - -	79	Ovarian Disease - - -	1127
Diphtheria - - -	9157	Paraplegia, Diseases of Spinal Cord - - -	2963	Diseases of Uterus and Vagina - - -	1289
Cerebro-spinal Fever - - -	1147	Other Diseases of Nervous System - - -	8481	Disorders of Menstruation - - -	177
Simple and Ill-defined Fever - - -	12014			Pelvic Abscess - - -	332
Enteric Fever - - -	8			Perineal Abscess - - -	68
Other Miasmatic Diseases - - -				Diseases of Testes, Penis, Scrotum, &c. - - -	148
Cholera - - -	1516	Otitis, Otorrhoea - - -	737		
Diarrhoea, Dysentery - - -	49756	Epistaxis and Diseases of Nose - - -	147	Abortion, Miscarriage - - -	181
Remittent Fever - - -	731	Ophthalmia and Diseases of Eye - - -	115	Puerperal Mania - - -	216
Ague - - -	187			Puerperal Convulsions - - -	663
Hydrophobia - - -	53	Endocarditis, Valvular Disease - - -	11731	Pacenta Prævia, Flooding - - -	1435
Glanders - - -	4	Pericarditis - - -	844	Phlegmonia Dolens - - -	211
Splenic Fever - - -	34	Hypertrophy of Heart - - -	727	Other Accidents of Childbirth - - -	888
Cow-pox and other Effects of Vaccination - - -	100	Angina Pectoris - - -	1191		
		Syncope - - -	3126	Varies, Necrosis - - -	2061
Syphilis - - -	4255	Aneurism - - -	1571	Arthritis, Ostitis, Periostitis - - -	286
Gonorrhoea, Stricture of Urethra - - -	48	Senile Gangrene - - -	2281	Other Diseases of Organs of Locomotion - - -	2317
		Embolism, Thrombosis - - -	1345		
Phagedæna - - -	139	Phlebitis - - -	260		
Erysipelas - - -	4041	Varicose Veins - - -	182	Carbuncle - - -	290
Pyæmia, Septicæmia - - -	1062	Other Diseases of Circulatory System - - -	53292	Phlegmon, Cellulitis - - -	539
Puerperal Fever - - -	4649			Lupus - - -	139
				Ulcer, Bed sore - - -	1078
Thrush - - -	1607	Laryngitis - - -	3108	Eczema - - -	765
Other Diseases from Vegetable parasites - - -	8	Croup - - -	8945	Empyphigus - - -	141
Hydatid Disease - - -	111	Other Diseases of Larynx and Trachea - - -	443	Other Diseases of Integumentary System - - -	473
Other Diseases from Animal parasites - - -	251	Emphysema, Asthma - - -	4461		
		Bronchitis - - -	106616	Fractures and Contusions - - -	13215
Starvation, Want of Breast-milk - - -	567	Pneumonia - - -	46444	Gun-shot Wounds - - -	177
Scurvy - - -	11	Pleurisy - - -	2739	Cut, Stab - - -	283
Intem- perance { Chronic Alcoholism - - -	1726	Other Diseases of Respiratory System - - -	9133	Burn, Scald - - -	3711
Delirium Tremens - - -	615			Poison - - -	584
				Drowning - - -	4902
Rheumatic Fever, Rheumatism of Heart - - -	5113	Stomatitis - - -	1098	Suffocation - - -	3284
Rheumatism - - -	1645	Dentition - - -	5316	Otherwise - - -	2090
Gout - - -	1018	Sore Throat, Quinay - - -	1364		
Rickets - - -	1145	Dyspepsia - - -	255	Homocide - - -	614
Cancer - - -	24029	Hæmatemesis - - -	763		
Tubercles Mesentericæ - - -	15762	Melæna - - -	310	Gun-shot Wounds - - -	219
Tubercular Meningitis (Acute Hydrocephalus) - - -	13191	Diseases of Stomach - - -	5214	Cut, Stab - - -	691
Phthisis - - -	92921	Enteritis - - -	6104	Poison - - -	454
Other Forms of Tuberculosis, Scrophula - - -	8651	Ulceration of Intestine - - -	1208	Drowning - - -	840
Purpura, Hemorrhagic Diathesis - - -	661	Ileus, Obstruction of Intestine - - -	3125	Hanging - - -	1294
Anæmia, Chlorosis, Leucocythæmia - - -	1093	Stricture or Strangulation of Intestine - - -	238	Otherwise - - -	330
Diabetes Mellitus - - -	2779	Intussusception of Intestine - - -	851		
Other Constitutional Diseases - - -	814	Hernia - - -	2131	Execution - - -	28
		Fistula - - -	247		
Premature Birth - - -	24635	Peritonitis - - -	450	Dropy - - -	1651
Atelectasis - - -	1023	Ascites - - -	669	Debility, Atrophy, Inanition - - -	44678
Cyanosis - - -	1778	Gallstones - - -	302	Mortification - - -	348
Spina Rida - - -	1181	Cirrhosis of Liver - - -	6210	Tumour - - -	723
Imperforate Anus - - -	345	Other Diseases of Digestive System - - -	11708	Ascites - - -	1322
Cleft Palate, Harelip - - -	371	Diseases of Lymphatic System - - -	722	Hæmorrhage - - -	269
Other Congenital Defects - - -	478	Diseases of Spleen - - -	211	Swollen (Cause unascertained) - - -	359
Old Age - - -	50630	Bronchoecle - - -	229	Other (Ill defined and not specified) Causes - - -	6646
		Addison's Disease - - -	232

* The prices of coal in 1853-81 are derived from a Parliamentary Return (No. 225, 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons: the quotations for 1882-3-4 are the means of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mineral Statistics Department, Home Office.

Mean of the Thirty- two years 1852-83 }	196,023	4,036	20.3

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships. See also note to Table 59.

TABLE 69.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1884.

N.B.—(1.) The Name of the District is in SMALL-CAPITALS, that of the Sub-district in *Italics*.
2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
5	WESTMINSTER - -	1884. 1 April -	The sub-districts of <i>Golden Square</i> and <i>Berwick Street</i> were united under the name of <i>St. James Westminster</i> (aggregate population 29,941).
9	ISLINGTON - -	1 January -	The district of ISLINGTON, consisting of the two sub-districts of <i>West Islington</i> (population 121,462) and <i>East Islington</i> (population 161,413) was divided into four sub-districts, viz., <i>Upper Holloway</i> (population 67,946), <i>Islington South-West</i> (population 100,976), <i>Islington South-East</i> (population 61,896), and <i>High-bury</i> (population 52,048).
17	WHITECHAPEL - -	1 January -	The sub-districts of <i>Whitechapel North</i> and <i>Whitechapel Church</i> were united under the name of <i>Whitechapel Church</i> (aggregate population 17,400).
18	ST. GEORGE-IN-THE-EAST	1 April -	The sub-districts of <i>St. Mary</i> and <i>St. Paul</i> were united under the name of <i>St. George's North</i> (aggregate population 33,747).
44	NORTH AYLESFORD -	26 December	The name of the District was altered to "STROOD."
53	TENTERDEN - -	1 July -	The sub-districts of <i>Kolsenden</i> and <i>Tenterden</i> were united under the name of <i>Tenterden</i> (aggregate population 10,461).
100	STOCKBRIDGE - -	1 January -	The parish of West Dean (population 313) was transferred from the sub-district of <i>Broughton</i> to the <i>Alderbury</i> sub-district (384 : 1) of the ALDERBURY District.
161	WINCHESTER - -	1 November	The parish of Chilcombe (population 300) was transferred from the <i>Twyford</i> sub-district to that of <i>Winchester</i> .
156	BRACKLEY - -	1 April -	The sub-districts of <i>Brackley</i> and <i>Sulgrave</i> were united under the name of <i>Brackley</i> (aggregate population 12,340).
221	SMALLBURGH - -	1 June -	See ERPINGHAM 222.
222	ERPINGHAM - -	" -	The parish of North Walsham (population 2224) was transferred from the sub-district of North Walsham, now named <i>Eppa</i> , to the sub-district of <i>Boston</i> (221 : 4), now named <i>North Walsham</i> in the SMALLBURGH District.
224	ALDERBURY - -	1 January -	See STOCKBRIDGE 100.
317	BATH - -	1 July -	The sub-districts of <i>Walcot</i> and <i>Lansdown</i> were united under the name of <i>Walcot</i> (aggregate population 34,363).

TABLE 69 (continued).—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1884.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
321	BARTON REGIS - -	1884. 1 October -	The parish of Filton (population 296) was transferred from the sub-district of <i>Stapleton</i> to that of <i>Ashley</i> .
436	CHESTERFIELD - -	1 February -	The parishes of North Wingfield and Tufton (aggregate population 3418) were transferred from the sub-district of <i>Chesterfield</i> to that of <i>Ashover</i> .
461	BOLTON - -	" -	The sub-districts of <i>Wasthoughton</i> and <i>Horwich</i> were united under the name of <i>Horwich</i> (aggregate population 13,740).

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," changes were made on the 24th March 1884 in the constitution of the following Districts, viz.:—EPSOM (30), GUILDFORD (32), HAMBLETON (34), KINGSTON (39), PETWORTH (80), SOUTH STONEHAM (98), DROXFORD (102), BEREHAMPTREAD (130), BANBURY (156), *HARDINGSTONE (159), DAVENTRY (161), HUNTINGDON (168), ST. IVES (169), LEIGHTON BUZZARD (175), NEWMARKET (181), ELY (182), NORTH WITCHFORD (183), WISBECH (185), LEXDEN (197), RISEBRIDGE (202), SUDBURY (203), CONYFORD (204), THINGOE (205), STOW (208), *HOXNE (210), BOSMERE (211), SAMFORD (212), *BLOFIELD (228), DOWNTON (238), CRICKLADE (242), CHIPPENHAM (244), CALNE (245), MARLBOROUGH (246), DEVIZES (247), MELKESHAM (248), WESTBURY (250), *WARMINGSTER (251), *WILTON (255), BEAMINGSTER (267), BRIDPORT (268), AXMINSTER (269), *ST. THOMAS (271), NEWTON ABBOT (273), TOTNES (274), KINGSBRIDGE (275), PLYMPTON ST. MART (276), TAVISTOCK (280), OKEHAMPTON (281), CREDITON (282), TIVERTON (283), *TORRINGTON (286), HOLSWORTHY (288), LAUNCESTON (291), *WILLITON (303), DELVEYTON (304), WELLINGTON (305), TAUNTON (306), CHARD (309), *YEOVIL (310), *WINCANTON (311), FROME (312), SHEPTON Mallet (313), WELLS (314), CLUTTON (316), *KEYNSHAM (318), BEDMINSTER (319), TROSBURY (323), DUNSTON (324), WESTBURY-ON-SYVERN (325), GLOUCESTER (327), WHEATENHURST (328), STROUD (329), TATCHEY (330), TEWKESBURY (330), LEDBURY (337), ROSS (338), HEREFORD (339), BROMYARD (341), LEOMINSTER (342), LUDLOW (344), BRIDGNORTH (348), ATCHAM (351), *WELLINGTON (357), *LICHFIELD (360), WEST BROMWICH (373), STOURBRIDGE (375), *MARTLEY (378), WORCESTER (379), UPTON-ON-SYVERN (380), PRESHORE (382), FOLESHILL (391), COVENTRY (392), MARKET BOSWORTH (403), ASHBY-DE-LA-ZOUCH (406), BARROW-ON-SOAR (408), MELTON MOWBRAY (410), BOSTON (417), HORNCASTLE (421), GAINSBOROUGH (426), EAST RETFORD (427), SOUTHWELL (432), NEWARK (433), SHARDLOW (435), *WARRINGTON (450), *HUNSLY (498), *WAKEFIELD (503), THORNE (512), GOOLE (513), DRIFFIELD (524), BRIDLINGTON (525), DARLINGTON (542), STOCKTON (543), *TRESDALE (546), MONMOUTH (551), *CARDIFF (556), *LAMPETER (603), *ABERATON (604), *HAY (610), KNIGHTON (611), RHAYADER (612), FORDEN (615).

* In these cases the limits of the sub-districts only are affected.

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

* Census year.

† Cholera was epidemic in the year 1853, and war raged in the years 1850 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1867-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

* Census year.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

TABLE 85.—SPAIN. Population, Marriages, Births, and Deaths, 1861-78.

NOTE.—The Population enumerated at the Census of 1869 was 15,673,336. The estimated Population for subsequent Years has been deduced from the Excess of Births over Deaths registered in each Year. The facts for the five years 1871-5 were not collected owing to the disturbed state of the country; those for the year 1877 and for the years 1879-84 have not yet been finally dealt with. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.
* Census year.

NOTE.—The numbers for Rome were first included with those for the Kingdom of Italy in 1872.
* Census year. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

1. The first part of the document is a list of names and dates, which appears to be a record of some kind. The names are written in a cursive script, and the dates are in a more formal, printed style. The list is organized in a columnar fashion, with names and dates alternating.

* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstract Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1884.

Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to rites of both persuasions: in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry a second time are entered as bachelors and spinsters.

ABSTRACT OF MARRIAGES.—Marriages registered in England, &c.

* The 620 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

‡ Prior to 25th December 1881 the Strood District was designated NORTH ASHFORD. See Table 22.

* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, as nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† The District of Kenton comprises the two Poor Law Unions of Paddington and Kensington.

‡ Prior to 25th December 1881 the STROOD District was designated NORTH ASHFORD. See Table 60.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

* The Superintendent Registrars' Districts (630 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2149 in number at the end of the year 1884) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths in the exact stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1883 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

§ 2: 1. - For the change made on 1st April 1891 in the constitution of the Sub-district now designated "St. James Westminster," see Table 69.

¶ 3: 1-4. - For changes made on 1st January 1884 consequent on the division of Islington civil parish into four Sub-districts, see Table 69.

* 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llandyfdog, and Amlwch Sub-districts) and Holyhead (Bryngwran, Llanddaubiai, and Holyhead Sub-districts). The parishes of Bodewryd and Rhosbeirio situated in Llanddaubiai Sub-district, however, belong to the Union of Anglesey, and not to the Union of Holyhead.

1. The first part of the document is a list of names and titles, including "The Hon. Mr. Justice" and "The Hon. Mr. Justice".

DEATHS IN WORKHOUSES, HOSPITALS, AND PUBLIC LUNATIC ASYLUMS.

1884.

THE following Table shows the numbers of deaths (Persons, Males, and Females) registered during 1884 in the Workhouses, Hospitals, and Public Lunatic Asylums of England. These figures afford the means of correcting the mortality of districts and sub-districts in which these Institutions are situated. The Table includes 1592 Institutions; of which 731 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 775 Hospitals or Infirmaries; and 86 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients (held on that account to be public for the purposes of this Table) are also included. In these 1592 Institutions 54,936 deaths were registered during the year, or 10·3 per cent. of the total deaths in England and Wales, against 10·2 and 10·6 per cent. in the two preceding years; 34,051 occurred in Workhouses, 15,778 in Hospitals, and 5,107 in Lunatic Asylums. The proportion to total deaths was 6·4 per cent. in Workhouses, 3·0 in Hospitals, and 1·0 in Lunatic Asylums; the proportion of total deaths recorded in Workhouses showed a slight decline from the proportions in recent years, but was higher than the proportion ten years previously.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Private Asylums for Idiots and Imbeciles, will be found in the notes to the following pages.

Deaths in Workhouses, Hospitals, and Public Lunatic Asylums, 1884.

* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

Of the above 11,208 ACCIDENTS, 115 are stated to have occurred to Persons in a state of INTOXICATION and 2 to Persons suffering from DELIRIUM TREMENS. And in 310 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYÆMIA, or TETANUS. Here follow the details:—

INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and not under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).

A

INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead found under the letter E, and not under G; St. James under the letter S, and not as "James. St number against each Sub-District, in the third column, refers to its numerical place in the T Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.
A			Ardleigh	Tendring	195; 4	Barton	Glanford Brigg
